HOW TO FILL THE TANK

After all connections are made and the optional water filter (if present) is installed do the following:

1. Turn on the water at its source.

2. Plug the machine into the electrical power and turn the power switch ON.

3. Press [✳ TEST START] , then press [⬇] until the display shows **TANK.FILL**.

2. Press [✳ TEST START] . This clears any tank error and starts filling the tank, if necessary.

NOTE

If it is taking a long time to fill the tank *AND THERE ARE NO LEAKS*,

you may see **TANK ERR** in the diagnostic list. Just press [✳ TEST START]

again after making sure there are no other problems, such as a restriction in the water inlet line or a clogged water filter.
