LIMITED EXPRESS WARRANTY

Automatic Products (AP) warrants these automatic merchandisers (the "Unit"), manufactured by it, to be free under normal use and service from defects in material or workmanship for a period of two (2) years from the date of delivery of this Unit to the original purchaser who purchased the Unit either directly from AP or from an authorized AP dealer or distributor ("AP Dealer/Distributor"). This warranty extends only to the original purchaser of the Unit, but only if purchased either directly from AP or from an authorized AP Dealer/Distributor ("Original Purchaser"), and is limited to the repair or replacement, at AP's sole option, of any part or parts of the Unit that are returned to AP or to the authorized AP Dealer/Distributor from whom the Unit was originally purchased, with all transportation charges prepaid by Original Purchaser, and which, on AP's examination, such returned part or parts shall conclusively appear to have been defective. This warranty does not extend to:

1. Any Unit, or part thereof, that was subjected to misuse, neglect, or accident by anyone other than AP after its delivery to the Original Purchaser;
2. Any Unit, or part thereof, that was modified, altered, incorrectly wired or improperly installed by anyone other than AP or used in violation of the instructions provided by AP;
3. A Unit, or part thereof, which has been repaired or altered by anyone other than AP or an authorized AP Dealer/Distributor;
4. A Unit, or part thereof, which has had the serial number removed, defaced, or otherwise altered;
5. Any plastic or glass windows, lamps, fluorescent tubes, and water contact parts;
6. Any Unit used outdoors;
7. Any accessories used with the Unit that were manufactured by some person or entity other than AP; or
8. Any Unit repaired within the warranty period with parts other than genuine AP built or endorsed parts.

AP DISCLAIMS ALL OTHER WARRANTIES OF ANY KIND AS TO THE UNIT AND ALL WARRANTIES OF ANY KIND AS TO ANY ACCESSORIES. THIS DISCLAIMER OF WARRANTIES INCLUDES (1) ANY EXPRESS WARRANTIES OTHER THAN THE LIMITED WARRANTY PROVIDED ABOVE AS TO THE UNIT AND (2) ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE AS TO THE UNIT AND ANY ACCESSORIES. UNDER NO CIRCUMSTANCES SHALL AP BE RESPONSIBLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES, LOSSES OR EXPENSES (INCLUDING BUT NOT LIMITED TO LOST PROFITS, LOST SALES, INJURY TO PERSON OR PROPERTY) ARISING FROM OR IN CONNECTION WITH THE USE OF, OR THE INABILITY TO USE, THE UNIT FOR ANY PURPOSE WHATSOEVER REGARDLESS OF THE LEGAL THEORY (CONTRACT, TORT OR OTHER). IN NO EVENT WILL AP BE OBLIGATED TO PAY DAMAGES FOR ANY AMOUNT EXCEEDING THE PRICE PAID FOR THE UNIT. No representative of AP or any other person is authorized to assume for AP, or agree to on the behalf of AP, any other liability or warranty in connection with the sale of this Unit.

AP reserves the right to make any changes or improvements in its products without notice and without obligation, and without being required to make corresponding changes or improvements in Units theretofore manufactured or sold.

INTRODUCTION

The Zone Combo features simple operation and built in flexibility, as well as extensive diagnostics and error reporting facilities to provide ease of maintenance.

HOW TO USE THIS MANUAL

This manual is divided into seven basic parts:

1. Unpacking and Installation.
2. Optional Equipment & Refrigeration
3. Components and Refrigeration.
4. Operating System.
5. Programming
6. Parts
7. Troubleshooting.

CAUTION: Certain procedures in both the operating section and the service section require that voltage be on in the machine. Only, trained personnel should perform this function. Exercise extreme caution while performing these procedures. These procedures will be marked with the lightening bolt symbol as it appears at left.

CAUTION: Certain procedures in both the operating section and the service section require a qualified trained technician to perform the particular task at hand. These procedures will be marked with the exclamation symbol as it appears at left.

Features

FEATURES OF THE ZONE COMBO MERCHANDISER

STANDARD FEATURES

- Up to 100 selections.
- Multi drop buss capabilities (MDB).
- Extensive diagnostics capabilities.
- Friendly text-based interface.
- Flexible spiral spacing for large products.
- Eight-point star drive motor.
- Dex/UCS compatible.
- Food/Frozen hosting.
- Real time clock.
- Machine reset capability.
- Chime.
- Third payment system ready.

PRICING

- Global pricing by machine or by shelf.
- Extensive accountability, including all discounts and free vends.
- Shutdown capabilities
- Combo vends.
- Programmable spiral count.
- Upload and download capabilities for pricing and set up.
- Programmable maximum payout.

SCROLLING DISPLAY

- User friendly two-line scrolling display to help with the selection process and provide customer feedback.
- User programmable point of sale and operational messages.
- 2 line display with 20 characters on each line.

NOISE LEVEL

Operates at less than 70 db (A).

ACCEPTABLE AMBIENT OPERATING TEMPERATURE RANGE.

All equipment manufactured by Automatic Products is designed to work properly in a temperature range of 10°C to 38°C (50°F to 100°F) in still air (75% R.H. non-condensing). The machine is capable of being stored in a temperature range of -18°C to 68°C (0°F to 155°F).

Specifications

Installation

Cautions

The following cautionary information should be reviewed before the machine is installed. Following these requirements and warnings are required.

CAUTION: This machine is designed for indoor usage only. Any other usage will void the Manufacturers Warranty.

Voltage and Polarity Check

It is important that this machine is hooked up to the proper voltage and polarity for your country. Use a voltmeter to verify voltage and polarity before connecting the machine to a wall outlet. For machines located in North America, use the diagram below to verify correct voltages.

CAUTION: Any procedure marked with the symbol at left requires that the Machine have the power applied and a shock hazard exists.

CAUTION: It is important that this machine is hooked up to the proper voltage and polarity for your country. Use a Voltmeter to verify voltage and polarity. Should the reading be any different than a normal reading or if you are unsure of what the reading should be contact an electrician.

CAUTION: Different countries may have unique plug arrangements. Ensure that the machine is properly grounded before operating.

CAUTION: The power cord for all machines manufactured for use outside of North America are of a type Y attachment. If the power cord is damaged, it must be replaced by the manufacturer, its service agent, or a similarly qualified person in order to avoid a hazard.

CAUTION: The machine is a heavy item. Ensure that sufficient personnel are available for lifting and transporting the machine. Use proper lifting procedures and equipment.

CAUTION: The system components in this machine utilize static sensitive components. Precautions for handling sensitive devices should be observed when handling these items.

Voltage and Polarity Check (for Machines located in North America Only)

It is important that this machine is hooked up to proper voltage and polarity. Using a voltmeter, perform the following checks from the illustration below.

Installation

The Zone Combo Line is assembled and packed so that a minimum amount of time is necessary for preparation to install it on location. The following steps are recommended to insure correct unpacking.

1. **Shipping Damage:** Thoroughly inspect the exterior of the carton for damage which may have occurred during shipment. Report any damage to delivering carrier and follow their instructions.
2. Remove the remainder of the packing material. On machines shipped with the lock in place, the keys are taped inside the coin return.

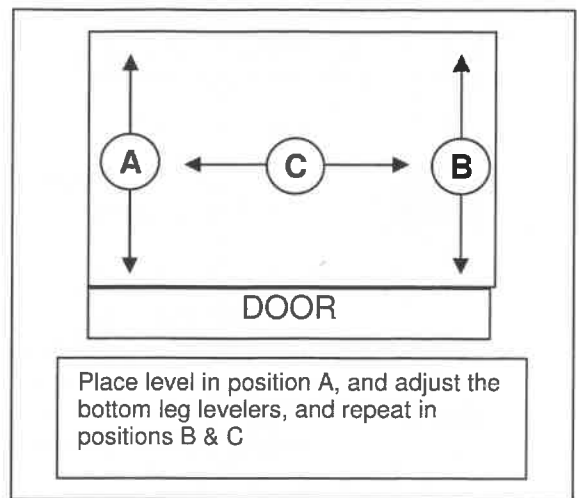

NOTE: On the machine, the weight concentration is toward the back of the cabinet. Trucking and lifting should be done from the back. CAUTION should be taken when trucking from side.

3. On machines with lock in place, first unlock and turn handle to open door. When no lock is furnished, remove clip and turn handle. Swing door to its full open position.
4. Remove all additional packing material from the machine.
5. **Warranty:** The warranty card is attached to the cover of this manual. It must be filled out in full and mailed at once to insure coverage.

Leveling the Machine on location is important for the proper function of the machine. There are four leveling screws in the legs of the machine to make any necessary adjustments. After positioning the machine, level it from front to rear and right to left directions. After leveling, turn front right (lock side) leveling screw in about one-half turn to drop this corner slightly to make the door easier to close and lock.

Clearance Requirements

It is necessary on Zone Combo machines to have 6" clearance behind the machine for air circulation.

◆ **IMPORTANT:** A set of anchoring brackets is included with each machine. This kit is located in the bottom of the machine with complete instructions. It is recommended that this kit be installed during set-up to prevent shifting of the machine.

Installation

Door Hinge Swing

This machine contains a newly designed door hinge. The design of the door hinge controls the maximum distance the door can swing open. The maximum opening position is reached when the screw is forced against the hinge body. This screw can be removed during installation to permit the door to swing completely open and can help maneuver the machine through a narrow doorway.

The screw should be replaced **immediately** upon reaching the machine's final location. Failure to replace this screw may result in damage to an adjacent machine or to the harnesses in the machine.

Position A – Door Closed.

Position B – Door open to nominal position with stop screw (D) installed.

Position C – Stop screw removed to permit door to reach maximum swing.

CAUTION: The screw should be replaced immediately upon reaching the machines final location. Failure to replace this stop may result in damage to an adjacent machine or the harnesses in the machine.

Installation

Basic Set Up Steps

1. Remove all packing materials.
2. Adjust the scrolling price tabs on the shelves.
3. Set prices and options on control board.
4. Set Clock.
5. Load machine adjust spacers or spirals as needed.
6. Install product pushers as needed.
7. Add coins to coin mechanism.
8. Coin test.
9. Bill test if applicable.
10. Install lock cylinder if needed.

Figure 1: Moving shelf into the loading position

Loading Snack Shelves

Open the main door to its full open position. While pushing down on the plastic lock lever located on the right side of the shelf, grasp the shelf under both front corners (see Figure 1). Lift the front of the shelf slightly and pull forward until the shelf reaches its stop. On shelves 1 through 4 the shelves tilt down (do not drop) to make loading easier. A new feature in the Zone Combo, the bottom 2 shelves do not tilt for easier loading. Only one product shelf should be in the loading position at any time. When returning a shelf, be sure the shelf is in its full home or vend position. Begin loading with the top shelf. Move it into the loading position. The height spacing for items is greatest in this shelf and the tallest bagged items should be placed there. Soft items, such as pastry, pies, etc., should be placed in the lowest snack shelf, making the drop distance as short as possible.

IMPORTANT: Product must not be forced into the spiral spaces it should fit freely. If a product fits tightly, use a larger pitch spiral. The bottom of the product should be placed on top of the spiral wire that rests on the shelf surface (see Figure 2). The width of the product must be greater than the diameter of the snack spiral. If it is smaller, the product may fall through when it is in the front, ready to vend position.

Figure 2: Placement of product on main product snack shelves and front end position of spiral.

Installation

Adjusting the Stopping Position of the Spiral

One primary difference that distinguishes the Zone Combo motor from previous motors is an eight sided star at the drive hub of the motor. This permits the stopping position of the spiral to be customized by the operator to ensure the best possible delivery of each product. To change the stopping position of the spiral, remove the spiral lock from the motor by pinching the shaft of the spiral lock from the back side of the motor and pulling forward on the front side of the spiral lock. The spiral lock can be reinstalled in any of eight different positions by turning the spiral lock to the position desired and pushing the shaft of the spiral lock through the eight sided star at the drive hub of the motor.

Figure 3: Removing and installing spiral.

Removal/Replacement of Spiral

Right Hand Spirals: Grasp the front of the spiral and turn it clockwise. Lift the spiral up and off of the spiral lock. When replacing a spiral attach it around the tab on the spiral lock and turn the spiral counterclockwise to lock it in place (see figure 3). Pull lightly on the front of the spiral to ensure it is locked in place.

Left Hand Spirals: Grasp the front of the spiral and turn it counter clockwise. Lift the spiral up and off of the spiral lock. When replacing a spiral attach it around the tab on the spiral lock and turn the spiral clockwise to lock it in place. Pull lightly on the front of the spiral to ensure it is locked in place.

Product Spacers - 5 Selection Shelf

A product spacer is used to reduce the width of the product area. This feature should be used on any 5-selection single spiral snack shelf where the product width is 4" or less. Spacers should fit within 1/8" of the product but should not fit tight against the product. There are three positions in each snack space where these spacers can be placed. To install the spacer, align the lock ears (on the lower edge of the spacer) with one of the three sets of slots (one front and one rear). (see Figure 4.) Push the spacer to the rear to allow the ears to enter the slots, then allow the spacer to move forward. Be sure the ears are in the same set of slots, front and rear (see Figure 4). Continue loading all spirals; adjust spacers where needed in the top shelf. Return the top shelf to the vend position and follow this procedure to load the remainder of the large spiral shelves.

Installation

Loading Main Product Candy Shelves

The 10-selection (candy type) shelves are loaded similarly to the 5-selection shelves except that the bottom of the product sits on the shelf in front of the spiral wire (see Figure 5). These products must also fit properly, and the product should fit freely: do not force product into spiral.

Product Spacers-10 Selection Shelf

The 10-selection shelves are equipped with a product spacer (see Figure 6) that can be pivoted from the right side of every other product space. These spacers should be pivoted out to hold the product upright, but not tight against the product. Leave about 1/8" clearance between the spacer and the product.

Figure 5: Placement of product on candy shelves and front end position of spiral.

Figure 6: Candy shelf product spacer positioned to hold candy upright.

Installation

Product Pushers

Included with the machine are enough pushers for you to install a pusher on each candy spiral. This plastic part is designed to push the top of the product forward while it is vending, helping it fall from the shelf. It can also be used with products that have the wrapper end flap on the outside of the package. In this case, the pusher prevents these products from hanging on the spiral by spreading the flap. The pusher should be installed at approximately the 1 o'clock position on the spiral with the tab extending forward (see Figure 7). Locate the pusher in its proper position, hold it against the spiral wire and push the semi-circular part around the spiral wire. Black pushers (#440215) are used on left hand spirals and white pushers (#44014-1) are used on right hand spirals. Black pushers are used on left hand spirals Note: Not every selection spiral will need a product pusher. (Example - Box Items.)

Figure 7: Location of product pusher on spiral.

Bagged or Boxed Items

Vending small bagged items in the 10-selection shelves if not loaded properly could be a problem. The sealed edge of the bag may get under the spiral wire causing the product to hang up after it has been vended. It is recommended that the lower edge of these types of product be folded forward and up (see Figure 8) next to the product before inserting into the spiral space. It is also recommended to use a slightly larger count spiral for bagged items because of the product settling to the bottom of the package.

Figure 8: Fold bagged items bottom edge forward and up.

Cigarette Vending From the Zone Combo

Cigarettes can be vended from the candy shelves using a (15 capacity) spiral for the soft pack regular, king, 100 MM or 120 MM packs. A (12 capacity) spiral should be used for (box) packs.

Lock Product Shelves

When all of the product has been loaded be sure all shelves are returned to their vend position behind the front roller guide.

Scrolling Price Tabs

Adjust the new scrolling price roles for each selection in the machine.

Installation

Cleaning

The Zone Combo will do the best merchandising job for you if it is kept clean. The display window can be cleaned with any good glass cleaner. The exterior and interior surfaces should be cleaned with warm water and mild detergent. Rinse thoroughly and dry all surfaces.

CAUTION: Do not use any cleaners containing silicon as this could cause electrical failures.

The main product shelves can be best cleaned with the spirals and product spacers removed. Refer to page 1.05 for removal of spirals and removal of the product spacers.

Clean the acceptor on the coin mechanism or bill validator frequently as accumulated dirt in this area can cause poor acceptance on coins or bills. Follow recommended cleaning procedures as described by the coin mechanism or bill validator manufacturer.

Optional Equipment

Dual Spiral Motors (Part # 360240)

Snack shelves can be set up to have dual spiral selections. The dual spirals will help vend specialty items better. **These motors are available through aftermarket parts only.**

Half Cycle Motors (Part #360241)

The half cycle motors are used to vend thin items. This motor is used with a product divider that is positioned down the center of the coil. The product is placed on both the left and right hand side of the coil. When the motor turns, it turns only 180 degrees (half revolution) rather than 360 degrees (full revolution). **These motors are available through aftermarket parts only.**

Touch Memory Harness

The touch memory harness (Part # 16800013) is used in conjunction with the touch memory button (CHIP) available separately (Part # 17500003). This harness will allow you to download all settable data, with the exception of the time and date. Once CHIP is programmed you can take it to as many machines as you wish to upload the information stored in CHIP. CHIP can be programmed from a machine that is already set up and then used to set up other machines that are to be programmed identically. For more information see Mode 30.

Refrigeration

The Refrigeration Unit

The Refrigeration Unit is comprised of a 1/3 horsepower compressor and is a hermetically sealed system (no service ports). The refrigerant used in the refrigeration system is 134a and the charge is 9.8 ounces. The refrigeration system is controlled by the Refrigeration Driver Board. The Zone Combo glassfront merchandisers are designed to operate at ambient temperature of 55°F to 100°F (13°C to 38°C).

Refrigeration Processing:

The Refrigeration Driver Board (P/N 80492751) maintains the temperature as measured by the solid state temperature sensor. The refrigeration unit will be turned on at the Set Temperature plus 3°F and will be turned off at the Set Temperature minus 3°F.

A minimum of 1 minute is required for both the cycle-on and cycle-off time of the relay. This insures the compressor is not cycled on and or off too rapidly.

Defrost Cycle

Independent of the temperature, the relay, therefore the compressor, will be turned off for a defrost cycle after 120 minutes of compressor run time. The defrost cycle will last a minimum of five minutes or until the temperature of the cabinet exceeds 45°F (5.5°C). The power for the evaporator fan motor is constant and continues to operate during a defrost cycle.

Settable Temperature Range

The temperature for this machine when dispensing perishable food is set automatically to 36°F when "Food" is chosen as the machine type. When selling non-perishable products and the machine type is set to "Zone", the settable temperature range is from 37°F to 80°F (3°C to 27°C). The recommended temperature when the machine is equipped with bottle shelves is 42°F (5.5°C). When using the machine to dispense typical candy and confectionary products, the recommended temperature is 65°F (18°C).

Setting the Temperature

Refer to Service Mode 40 for the procedure to set the temperature.

Refrigeration Driver Board (RDB)

The Refrigeration Driver Board (P/N 80492751) is located inside the power supply box. The RDB has the capability to maintain two temperatures, however in this design, only the lower zone is monitored. Power and communication to operate the RDB is supplied via the MDB connector on the logic board using a communications cable. Power to operate the refrigeration unit is supplied to the Refrigeration Driver Board immediately after the EMI filter and is switched on and off by a relay on the Refrigeration Driver Board.

Temperature Probe

The temperature probe (P/N 13600001-01) is located in the cabinet below the bottom shelf on the right hand side, just below the evaporator coil. The probe is connected to JP3 on the RDB. An unplugged or open temperature sensor probe will display as -9°F (-9°C). A shorted probe will display as 99°F (37°C).

For complete pin-outs of the Refrigeration Driver Board, see the Troubleshooting Section of this manual.

Checking the Current Temperature

The temperature inside the machine can be viewed from the outside by pressing and holding the * key for degrees °F or # key for degrees °C.

Hosting

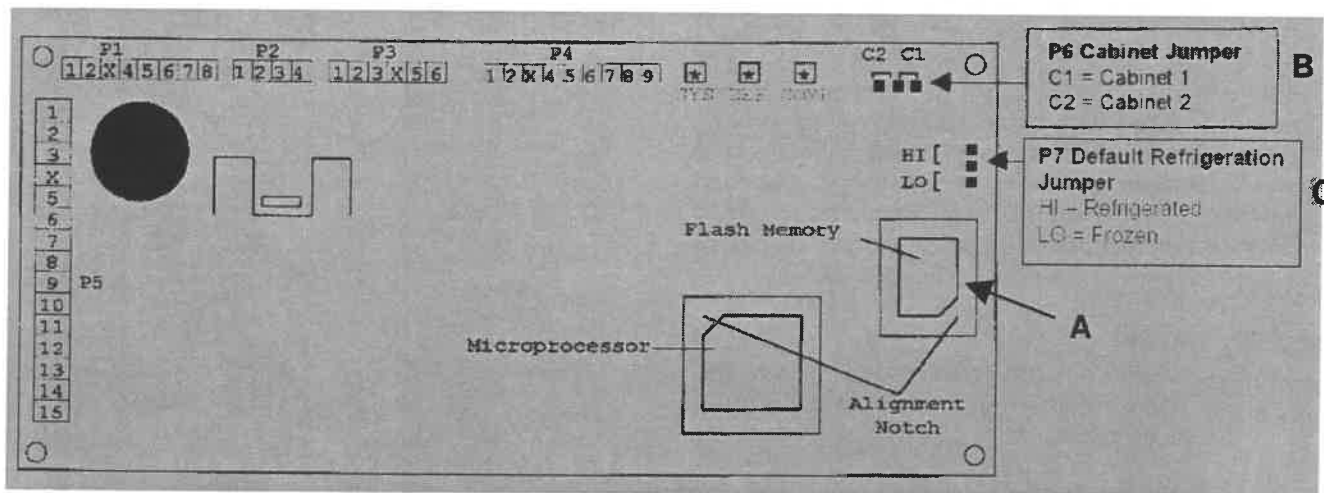

The Zone Combo snack machine may be used to host a 320/960 Frozen/Refrigerated or a 937 Satellite machine. The following steps should be followed.

320/960 Instructions

1. Check the software version of the food driver board. For the 320/960 to work properly with a Zone Combo machine the food driver board must have Revision 2.1 or greater. Arrow A in the diagram below.
2. Set the cabinet jumper to cabinet 2. Jumper B in diagram below.
3. Set the refrigeration jumper to your desired setting, either frozen or refrigerated. Jumper C in diagram.
4. Plug the communications cable directly into the MDB plug on the Zone Combo control board.
5. Set the temperature in Mode 40.
6. Set motor pairs if applicable in Mode 23.
7. Set the Golden Eye selections in Mode 21 if applicable.
8. Set prices in Mode 20.

937 Instructions

1. Check the software version of the Satellite driver board. For the Satellite to work properly with a Zone Combo machine the driver board software must have Revision XX or greater. Arrow A in the diagram below.
2. Set the cabinet jumper to cabinet 2. Jumper B in diagram below.
3. Plug the communications cable directly into the MDB plug on the Zone Combo control board.
4. Set the Golden Eye selection in Mode 21 if applicable.
5. Set prices in Mode 20.

SPECIAL INFORMATION

When a new Zone Combo machine is used to host a Model 960 Á LA CARTE merchandiser, the software on the Food Driver Board (FDB) MUST be Version 2.1 or higher. If the software is less than Version 2.1, you may experience repeated baffle door errors. These errors will disable the Á LA CARTE. If you require new FDB software, please order P/N 360273.

Components

Power Supply

The 120 VAC power cord from the wall outlet enters the machine and plugs into the bottom of the main junction box located on right side of the cabinet. The junction box contains the power distribution components, consisting of the control board, filter, circuit breakers and the transformer. The voltage outputs from the junction box to the board are 24 volts and 8 volts and plugs into the (P3 position) of the Logic Board.

Lighting System

The Zone Combo machine features a new low voltage LED color corrected lighting system. This system consists of a 9.4VDC regulating power supply and 12 – 1 Watt LED's producing 60 lumens of light.

Flexi Shelves

The Zone Combo machine features the new Flexi Shelf. With the new Flexi Shelf all of the selection dividers are removable allowing the shelf to be configured to vend wide products such as submarine type sandwiches.. There are either five or six main product shelves per machine. Each selection has its own motor mounted to the back of the shelf. Every shelf has its own harness and plug for connecting to the remainder of the circuit through the cabinet receptacle, located in the rear right of the cabinet. It is possible to exchange a five selection shelf with a ten selection shelf or visa versa. The tracks in the back of the cabinet permit the vertical movement of the shelves in one inch intervals. To do this the shelf should be removed and the cabinet back harness receptacle lowered or raised along with the right & left shelf tracks.

Note

- ◆ When exchanging the shelves, you will not need any parts but you will have to reprogram the machines prices.

Pairable Motor Shelf

The Zone Combo models permit the pairing of two sequential motors on a shelf. This feature allows 2 candy selections to be converted to a dual spiral snack selection, by removing the product divider between the spirals, and pairing the motors electronically. See Mode 23 for additional information on pairing motors.

Bottle Shelf

The Zone Combo model includes up to 3 – 8 select bottle shelves. The bottle shelves can be raised or lowered to vend up to 24 ounce bottles.

Delivery Bin

This is located below the display window on the door and is mechanically operated.

Figure 11: Power Supply Box.

Components

Vend Motors

The vend motors used in the Zone Combo machines have been specifically developed to operate with the AP Control System. One primary difference that distinguishes the new motors from previous motors is the presence of an eight sided star at the drive hub of the motor. This permits the stopping position of the spiral to be customized by the operator to ensure the best possible delivery of product. Motors are of the fast trac style, with all electronics required to correctly operate the motor contained inside the gear case or the motor housing and no external control board. Each of the motors used with the Zone Combo Control System will have two terminals. The two terminals continue to be used to identify the shelf and column (selection) to be vended.

Each motor requires two wires to operate correctly. These wires are: shelf common, and selection.

Each selection on a shelf will have the same common shelf wire - all shelf harness use wire #12 as a shelf common. This corresponds to the selected shelf wire in the cabinet harness. The terminal for the shelf common in the harness is the smaller of the two.

Selection numbers are assigned from left to right, starting with selection 0. Each selections number corresponds to the number of the wire for that selection.

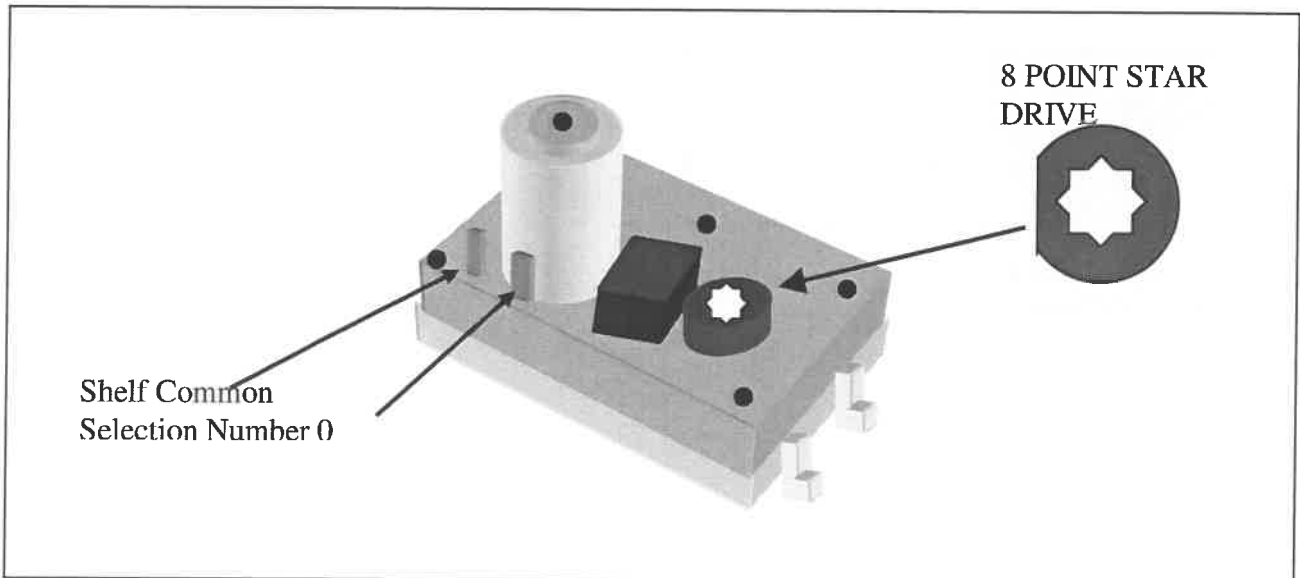

Selection numbers in the Zone Combo Machines support a three digit selection system. The first digit indicates the cabinet number, the second digit is the shelf number and the third digit is the selection number on that shelf.

Part #	Case Color code	Description
360275	1/2 blue, 1/2 white, 8 point star drive	CW food/Snack motor
360276	1/2 blue, 1/2 grey, 8 point star drive	CCW Food/Snack motor
360240	1/2 blue, 1/2 white, 8 point star drive	Dual spiral
360241	1/2 white, 1/2 brown, 8 point star drive	1/2 cycle motor

Zone Combo Motors.

Motors highlighted in bold are standard production motors. All other motors are available through aftermarket parts only.

Components

Logic Board & Display

The control board contains all of the decision-making and display controls. All peripherals plug into the controller. The all new Zone Combo display contains 2 display lines each with a maximum of 20 characters. All Credit, Price, Diagnostic Information and Options (In Service Mode) will be displayed on this display.

A new feature added to the Zone Combo Machines is a real time clock. This addition will allow the programming of timed events such as discounts and shutdowns (see the programming guide in this manual for more details).

Keypad

The Selection keypad is located on the door directly below the display. The Selection Keypad is used as an input source for settable data while in the Service Mode. The keypad is only active for service functions when the door is open, so even in the event of vandalism to the control bezel; no access to the control functions is permitted.

Zone Combo keypad.

Coin Mechs, Validators and Card Readers

The Zone Combo Machines support MDB protocol only. The maximum number of MDB payment peripherals is one coin mechanism, one bill validator, and two card reader systems.

The Zone Combo will automatically determine at power up which peripherals are connected and configure itself accordingly.

	MDB Coin Mechanism	MDB Bill Validator

AP Golden Eye® Guaranteed Delivery System

Modes of Operation for the ST Series

Introduction

The premise behind the development and introduction of Golden Eye (GE) was to improve customer (machine user) satisfaction by guaranteeing delivery of the product they have selected. In addition to increasing customer satisfaction and loyalty, the guaranteed delivery of products reduces operational costs and increases efficiencies, therefore making the operator more profitable.

An average service call costs between \$65 and \$100. Golden Eye reduces these costly calls for product hang-ups and missed vends. Golden Eye also eliminates the time and costs associated with credit vouchers due to missed vends. Lastly, operators may risk losing an account if product vend failure occurs on a repeated basis.

While careful and consistent loading of products helps to ensure a positive vend, Golden Eye provides a positive vend solution that takes these variables out of the equation, and works efficiently and effectively to deliver the product.

Function

The AP Golden Eye II Guaranteed Delivery System consists of a series of 12 infrared pulsed beams that create a web of interlaced beams just above the opening of the delivery bin in our glass front machines. When any one of these infrared beams is broken by a product falling into the delivery bin during a vend, the GE sensors transmit a signal to the Logic Control Board that the vend occurred successfully, and payment is collected, and change is returned, if required. If the product is not delivered successfully, the credit reappears on the display and allows the customer to choose an alternate item, or press the coin return to receive their money back.

Modes of operation

The GE II system has three selectable modes of operation: **Off**, **Home**, or **Drop**. The operator has the option to choose any of these four modes, and once a mode of operation is selected, choose which selections in the machine will be monitored by GE.

Off Mode

When GE is set to **Off**, the GE system is disabled, and all selections in the machine will run one time only.

Home Mode

When GE is set to **Home**, and the customer makes their selection, the selection motor begins its cycle,

and the GE sensor begins watching for a product to fall into the bin. The selection motor makes a complete revolution, returns to the home position, and pauses for 2 seconds. If no product is detected, **the selection motor then runs a second complete cycle** attempting to deliver the product. The motor pauses a second time, and if no product was detected during this vend, the motor runs a third complete cycle. If a product is delivered during any of the three cycles, the purchase is completed, and any change required is returned. If no product was delivered during any of the three cycles, an error is created (see Golden Eye Errors below). The credit reappears on the display and allows the customer to choose an alternate item, or press the coin return to receive their money back.

Drop Mode

When GE is set to **Drop** and the customer makes their selection, the selection motor begins its cycle, while GE sensor begins watching for a product to fall into the bin. The selection motor makes a complete revolution, returns to the home position, and pauses for 2 seconds. If no product is detected, the selection motor begins a second cycle, and if a product interrupts the sensor beams, **the selection motor stops immediately**, leaving the motor in an off home position. If no product is detected during the second cycle, the motor runs a third cycle, and stops immediately upon detection of the product dropping in the bin. If the motor is stopped in an "off home", position, the next time this item is vended, the motor returns to home and pauses. If a product is detected during this partial cycle, the motor remains at home, and the transaction is complete. If no product is detected, the motor begins a second cycle, and if a product falling into the bin is detected, the motor stops immediately, and the transaction is complete. If no product was delivered during any of the three cycles, an error is created (see Golden Eye Errors below). The credit reappears on the display and allows the customer to choose an alternate item, or press the coin return to receive their money back.

Golden Eye Errors

One of the critical new features of Golden Eye II is an increase in the number and type of diagnostic errors available to the technician to assist them in determining the cause of a GE error. The table below explains each of these available errors. More detailed information on these errors is available in the Troubleshooting section of this manual.

GOLDENEYE XXX FAILED

After any selection motor (XXX) runs three times without GE detecting a product, an error is posted, and that selection is disabled from vending. If three different selections are disabled with GE errors, then a GE Disabled error is posted, and GE for the entire machine is disabled, and all selections operate as if GE was set to **Off**. For machines set to **Home**, this disabled condition remains until the machine door is opened and closed. For machines set to **Drop** the "C" key on the keypad be pressed before closing the door to return disabled selections to operation. The errors will remain until they are cleared.

GOLDENEYE XXX FAILED	Three items missed by the Golden Eye Sensor. XXX indicates which selection.
CABx GOLDENEYE ERROR	Three different selections in a cabinet missed by the Golden Eye Sensor. X indicates which cabinet
CABx TRAN + REC BAD	All Transmitters and Receivers bad - X indicates which cabinet.
CABx RECEIVER Y BAD	Receiver (Sensor) Y failed, Y indicates the number of the Sensor, X indicates which cabinet
CABx TRANSMTR Y BAD	Transmitter (LED) Y failed, Y indicates the number of the LED, X indicates which cabinet
CABx TRN Y TO REC Y	Transmitters Y not seen by Receiver Y, X indicates which cabinet

Choosing Between Drop vs. Home

Please consider the information below when deciding which mode of Golden Eye to use:

1) If a machine is set to the **Drop** mode, the "automatic motor scan upon door closure to restore all the motors to their home position" is disabled. To perform a motor scan and cycle all motors to their home position, **you must first press the "C" key on the Key Pad before closing the door.** This trademark feature of AP equipment since 1985 is a valuable diagnostic tool and it will also warn a route service person if they have not pushed all the shelves back into their normal position after servicing.

Utilizing the drop mode disables the automatic function of this important feature. Route service personnel should be instructed to press Mode Switch and the door switch to home all the motors before filling the machine.

2) If a machine is set to the **Drop** mode, and a route service person ignores the errors stored, and closes the door without pressing the "C"

key, they will leave the previously disabled selection still disabled, even though they may have cleared any product jams or misloads, and refilled the selection.

3) The **Drop** mode may leave some selections in an "off home" spiral position. Historically, AP snack machine spirals self-home, so it is possible that route service personnel and/or consumers may question a selection's off home spiral appearance. Consumers may avoid that selection, or the machine altogether, thinking that something is "wrong" with it. This may lead to an unnecessary service call. When using the either of the **Drop** modes you may want to reassure your client that spirals in an "off home" position are normal and will produce a positive vend

4) The **Home** mode keeps the "motor scan upon door closure to restore all the motors to their home position" automatically enabled.

5) The **Home** mode will always leave selections in their home spiral position.

6) Golden Eye *could* deliver a second product on a failed vend. However, the extra occasional product cost is well worth the savings of a service call due to a product hang-up or missed vend.

Connecting Golden Eye from a 320/960 to a Host Cabinet

When using the Golden Eye Guaranteed Delivery System in a À LA CARTE – 320/960 Food/Frozen merchandiser, the Golden Eye harness from the Communications cable must be connected to the existing Golden Eye harness in the Zone Combo machine.

1. Identify the harness in the host machine plugged to P11, located on the right edge of the board, bottom connector.
2. In a Zone Combo, there should be a connector plugged to the board in P11. When the host machine is a snack, there will be one small 6 pin connector available in this harness. See Photo # 1. The mating 6 pin connector from the 960 Communication cable should be connected to this extra 6 pin connector.
3. Access Mode 21 and enable the required selection for Golden Eye.

Photo 1 – À LA CARTE Golden Eye connection in a host SNACK machine

Operating System

Power Up State

Following a power-up or reset condition, the display will show "AUTOMATIC PRODUCTS" on the top line and "GPL / CMS" with three bouncing dots on either side on the bottom line.

Motor Scan

Upon closing the door the display will show the firmware revision level (see Figure 11), perform a diagnostic routine that will scan and home the motors determining what motors exist in the configuration. After completion of this scan, the status of all the motors will be reported on the display (see Figure 12).

Standby

In Standby, the operator selected message will appear on both the top and bottom line. The factory default messages are "Have a nice day" on the top line, and "Credit .00" on the second line. See the Operating system, Mode 60 for details on how to change the standby message. As soon as credit is deposited, the accumulated credit will be shown on the bottom line until a selection is made.

Keypad echo

When the first numeric key is pressed the display will show the selection number in the third leftmost digit. This character will remain for 5 seconds or until another key is pressed. Once all 3 keys are pressed, the selection will be shown on the display for one second and then the associated price for the product will display. If the selection is disabled or shut down (using the Shutdown pins) the display will show "Invalid selection" for 5 seconds or until a new selection key is pressed. If the selection is enabled but not functioning properly (not present or not home) the display will show "Make Another Selection" for 5 seconds or until a new selection key is pressed.

Credit Accumulation

Credit may be accumulated through a coin changer, bill acceptor or card reader. A non-revaluing card reader credit cannot be mixed with coin and/or bill credit during a single transaction or vend. If card reader revalues the coin & bill credit goes to the card, and then a vend may still be attempted. Credit acceptance will be disabled when the accumulated credit equals or exceeds the highest priced item. Credit accumulation from any source is disabled or escrowed if change is not available. If the amount of card reader credit available exceeds the maximum displayable credit, the maximum credit will be displayed.

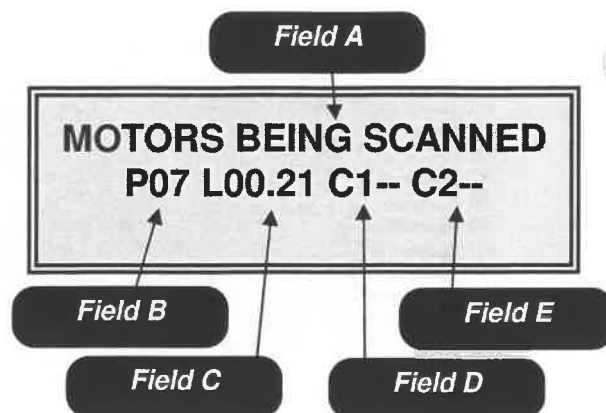

FIGURE 11

Field A is the informational heading.
Field B is the microprocessor version number.

Field C is the software version number.
Field D is the software version in the temperature control board for cabinet 1.
Field E is the software version in the temperature control board for cabinet 2.

FIGURE 12

Field A shows the lowest shelf number not found during the automatic scan of motors.
Field B is the number of good motors.
Field C is the number of bad motors.
Field D is the number of motors not present.

Operating System

Vend Process

After a keypad entry is made the logic board determines if sufficient credit is available for the selection attempted. If the credit is greater than or equal to the selection price, a vend attempt will be made for that selection. During this time, the selection will be shown on the display. If credit is less than the selection price, the correct price and current credit amount will be displayed for 5 seconds or until a new selection key is pressed.

Change Payment

Change will be returned during the vend process as soon as it is determined that the motor has moved off of the home position. This will change if Golden Eye is active. When Golden Eye is active, the transaction is not completed until the GE sensors confirm delivery of the product. The amount of change to be returned will be displayed until all coinage is paid back. The least amount of coins available will be paid back for all credit returns.

Use Correct Change

If the level of the changer's least value coin tube is below the lowest sensor, the "Use Correct Change" message will be shown on the display. If the machine is unable to vend the selected item because of low change, the display will show "Use Correct Change" for 5 seconds or until a new selection key is pressed.

Make Another Selection

If the machine is unable to vend the selected item, the "Make Another Selection" message will be displayed for 5 seconds or until a new selection key is pressed.

Token Vends

Following the acceptance of a token, the display will show "FREE". Further credit acceptance is disabled and a single item may be selected to vend for the token credit. See the Operating Section Mode 29, for instructions on setting up and choosing which selections will work with tokens.

Accountability Information

All MIS data is stored as both resettable and non-resettable with the exception of Machine Identification Number, Machine Serial Number, Software Version Number, Number of MIS Resets, Number of Machine Resets and Door Open History, which are stored as non-resettable only. All vend counters will roll over at 7 digits (9,999,999). All cash counters will roll over at 8 digits including the decimal point (999,999.99). Vend accounting (MIS) is updated as shown in Table 1.

Field	Vend Type			
	Token	Vend	Testvend	Freevend
#VENDS	X	X		
\$VENDS (Sale Price)	0	X		
#/PROD	X	X		
\$/PROD (Sale Price)	0	X		
#/TESTVEND			X	
# /FREE				X
\$ /FREE				X
# /TOKEN	X			
\$ /TOKEN	X			

Table 1: MIS Field Update Chart

X - Indicates which field is updated for a given vend type.

Shutdowns

There are 2 options available to shutdown the Zone Combo machine.

1. The Zone Combo machine is capable of having timed shut down periods. More information can be found in the programming section Mode 51.

2. The control board on the Zone Combo machine can be shutdown by creating a closed circuit between pin 3 & pin 4 on the service connector P2. This shutdown type will lock out selections entered into mode 32. When in this shutdown type and a shutdown selection is entered the display will show "Invalid Selection" for 5 seconds or until a new selection key is pressed.

Caution: Do not apply Voltage to these pins! Damage to the Board will result!

DEX/UCS

The Zone Combo supports DEX/UCS Communications Protocol - NAMA Vending Industry Data Retrieval Standard. The machine will automatically recognize the DEX/UCS device when it is plugged into the control board and will recognize when the device initiates the communication protocol. The transmission/reception of data to the device will then take place automatically. See the next page of this manual for definitions of the DEX/UCS download protocol.

◆ See Page 5.31 for information regarding the setting of a Serial Number, Machine ID and Location ID.

Operating System

The MIS data stored by the machine for a DEX/UCS download is as follows:

Table 2: DEX/UCS Information.

Programming

Service Modes

The table on the right side of this page is a copy of the decal found on the glass extension inside the Zone Combo machines. This decal provides a list of the service modes described in the following pages.

Access to the Service Mode, is granted upon opening of the main door. If a period of no activity occurs for 5 minutes, the controller will automatically revert to the Operate Mode. Entrance to the Service Mode clears any current credit. If no errors are present the following display will appear (Figure 13).

FIGURE 13: Initial Service Mode Screen when no errors are present.

To enter the Service Modes (see Figure 15) press the C key or use the numeric key pad to enter the Service Mode number.

If errors are present the error reporting screen will be displayed (see Figure 14). Use the ◀ and ▶ keys to scroll through the errors listed. Press the # key followed by the * key to clear the errors. To enter the Service Modes (see Figure 15) press the C key or use the numeric key pad to enter to the Service Mode number.

FIGURE 14: Initial Service Mode Screen when errors are present.

- Field A** is the sequential number of the error.
- Field B** is the error description field.
- Field C** is the motor number if applicable.
- Field D** is the date of the error.
- Field E** is the time of the error.

◆ See the Troubleshooting Section of this manual for specific information regarding the errors being reported.

Table 4: Historical accountability fields.

Mode 01 – Historical Accountability

Field A is the accountability name field.

Field B is the total vend count field.

Field C is the total value field.

◆ When a data field begins with a # symbol this indicates a vend counter. When the data field begins with a \$ sign this indicates a cash value.

Programming

Mode 02 – Historical by Selection

Mode 02 is used to view the historical accountability by selection. To access this mode, press **02** on the numeric keypad.

Pressing either the ◀ or ▶ key will sequence you through the selections or use the numeric key pad to enter a selection number into Field A. Field B shows date and Field C shows you the time of the last vend for the selection shown in Field A. Field D shows you the number of vends and Field E shows you the total dollar value of vends for the item in Field A. To exit this mode, press the **C** key or press the Service Switch.

◆ **All time based information is dependent upon the clock on the control board being set correctly, see Mode 50.**

Mode 03 – Interval Accountability

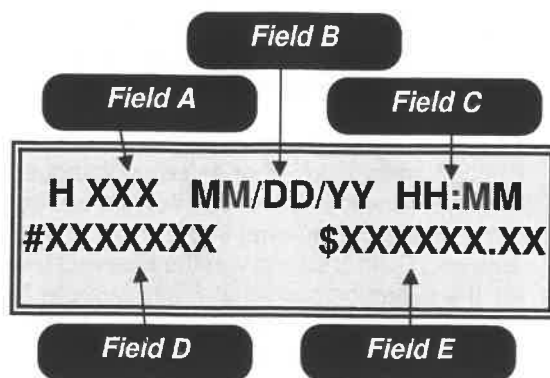

Mode 03 is used to view the interval accountability. To access this mode, press **03** on the numeric keypad.

Pressing either the ◀ or ▶ key will sequence you through the interval accountability fields in the order shown in the table below. To exit this mode, press the **C** key or press the Service Switch.

◆ **All interval data is reset to zero under the following two conditions.**

1. A successful DEX download is performed, or
2. Mode 05 is used to clear the Interval data.

This also applies to the Interval data in Modes 04 and 06.

Mode 02 – Historical by Selection

Field A is the item number.

Field B is the date of the last vend for the item in Field A.

Field C is the time of the last vend for the item in Field A.

Field D is the number of vends for the item in Field A

Field E is the historical dollar value of all vends for the item in Field A.

Mode 03 – Interval Accountability

Field A is the accountability name field.

Field B is the interval vend count field.

Field C is the interval dollar value field.

Programming

Mode 04 – Interval by Selection

Mode 04 is used to view the interval accountability by selection. To access this mode, press **04** on the numeric keypad.

Pressing either the ◀ or ▶ key will sequence you through the selections or use the numeric key pad to enter a selection number into Field A. Field B shows date and Field C shows you the time of the last vend for the selection shown in Field A. Field D shows you the number of vends and Field E shows you the dollar value of vends for the item in Field A. To exit this mode, press the **C** key or press the Service Switch.

◆When the security option in Mode 35 is enabled only Modes 01 through 04 will be accessible without a password. Attempting to access any other Mode will prompt the operator to enter the correct password.

Mode 04 – Interval by Selection

- Field A** is the item number.
- Field B** is the date of the last vend for the item in Field A.
- Field C** is the time of the last vend for the item in Field A.
- Field D** is the number of vends for the item in Field A
- Field E** is the dollar value of the vend for the item in Field A.

FIELD A	DESCRIPTION
The display will show	
INTR PAID SALES #0000000 \$0000000.00	Total Value of Sales
INTR NUMBER TESTS #0000000	# of Test Vends
INTR FREE VENDS #0000000 \$0000000.00	Free Vends
INTR CASH VENDS #0000000 \$0000000.00	Cash Sale
INTR VALUE BILLS \$000000	Value of Bills Stacked
INTR VALUE CASH \$0000000.00	Value of Cash In
INTR VALUE TUBE \$0000000.00	Value of Coins to Tubes
INTR VALUE BOX \$0000000.00	Value of Coins Routed to Cash Box
INTR VALUE DISP \$0000000.00	Value of Cash Dispensed
INTR VALUE MDISP \$0000000.00	Value of Cash Manually Dispensed
INTR VALUE ECV \$0000000.00	Value of Exact Change Vends
VALUE TUBE COINS \$0000.00	Current Value of Coins in Tubes
INTR TOKEN VENDS #0000000 \$0000000.00	Token Vends
INTR CASHLESS VENDS #0000000 \$0000000.00	# of Cashless Vends
GOLDEN EYE REVISIONS CAB1 00 CAB2 00	Golden Eye Software Revision
INTR NUMBER GE #0000000	# OF Golden Eye Spiral Turns

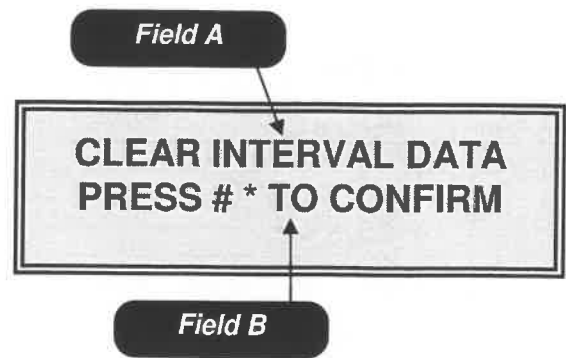

Table 5: Interval accountability fields.

Programming

Mode 05 – Clear Interval Data

Mode 05 is used to clear the interval data. To access this mode, press **05** on the numeric keypad.

Upon entering the display will show “CLEAR INTERVAL DATA”. Pressing the # key followed by the * key will clear all interval data. To exit this mode without clearing the data, press the **C** key or press the Service Switch.

Mode 05 – Clear Interval Data
Field A is the mode identification field.
Field B is the instruction field.

Mode 06 – Print out Accountability

Mode 06 is used to transmit the MIS information to a printer. To access this mode, press **06** on the numeric keypad.

Press the # key to send all historical and interval accountability including data by selection. Use the * key to send all historical and interval data but not send the data by selection, for specific details of what is included in each list see Table 6. To exit this mode, press the **C** key or press the Service Switch.

Mode 06 – Print out Accountability.
Field A shows the transmission characteristics for the printer.
Field B is the short list download instruction field.
Field C is the full list download instruction field.

Table 6 Notes

- ◆ An (H) at the end of the definition means historical data.
- ◆ An (I) at the end of the definition means Interval data.
- ◆ The column heading titled F is the full list.
- ◆ The column heading titled S is the short list.
- ◆ Fields highlighted in bold are repeated for each valid selection in the machine.

◆ See Page 5.31 for information regarding the setting of a Serial Number, Machine id and Location id.

Table 6: MIS Definitions.

Programming

Mode 10 – Tube Fill

Mode 10 allows you to fill the coin mech and the logic board will count the money as it goes in and continually track the coin mech inventory. This is the count the board uses when you choose tube leveling as the payout type in Mode 31. To access this mode, press **10** on the numeric keypad.

Upon entering the tube fill mode the controller will display the current status of the coin tubes. As coins are inserted into the top of the changer, the display will show the tube the coin was saved to in Field A, the value of all coins in that tube in Field B and the total dollar amount of coins in the changer in Field C. Coins may be dispensed by using the switches on the coin mech. To exit this mode, press the **C** key or press the Service Switch.

◆ **Before using the machine for the first time, the coin mech must have a minimum of \$5 in the coin tubes to permit the acceptance of bills.**

Mode 11 – External Accountability

Mode 11 is used to permit you or your customer, via a password, to review the total vend count and total cash accepted by the machine. To access this mode, press **11** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the external accountability setup mode, the display will show the current external accountability state. Use the numeric key pad to set a 4 digit security code in field A. Toggle to field B use the # key to turn the external accountability function on (Y) or off (N). To exit this mode, press the **C** key or press the Service Switch.

Note

◆ If enabled, instruct the customer/contact to enter 8 and then the 4 digit code. The display will show the total vend count in Field C and the total value in Field D.

Mode 10 – Tube Fill

Field A is the tube number the coin was saved to.

Field B is the value of coins in the tube identified in Field A.

Field C is the total value of coins in the changer.

Mode 11 – External Accountability

Field A is the security code field.

Field B is the feature on/off field.

Mode 11 – Customer Viewable Data

Field C is the total vend count field.

Field D is the total value field.

Programming

Mode 20 – Price Assignment

Mode 20 is used to assign the standard price for all selections in the machine. To access this mode, press **20** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Use the numeric keypad to enter the price in Field A, then toggle to Field B to assign the current price to a selection. To exit this mode, press the **C** key or press the Service Switch.

Note

- ◆ The maximum price allowed is \$99.99.

Special Actions

- ◆ Setting selections with a blank price disables that selection which means DEX information will no longer be transferred or displayed for items disabled in this way. The blank price is set by depressing the # Key.
- ◆ The * key can be used as a wildcard in Field B to set entire rows (12*) or the entire machine (1**).
- ◆ After assigning the prices, make sure you adjust the scrolling price tabs to reflect the current or new price.

◆ You can use the ◀ or ▶ key while in the operate mode with the door open to check the prices in the machine.

Mode 21 – Golden Eye Enable Setup

Mode 21 is used to set up the Golden Eye Guarantee Delivery System. To access this mode, press **21** on the numeric key pad.

Upon entering the Golden Eye setup mode, the display will show the current Golden Eye state in Field A. Toggle between the available options in Field A by using the # key. Each selection affected by the setting in Field A are shown in sequence in Field B, use the ◀ or ▶ key to scroll through these selections. Use the numeric key pad to add selections in Field B. To remove a selection from Field B, press the # key while the selection number is displayed. To exit this mode, press the **C** key or press the Service Switch.

Mode 20 – Price Assignment
Field A is the price setting field.
Field B is the selection assignment field.

Mode 21 – Golden Eye Enable Setup
Field A is the Golden Eye option setting field.
Field B is the selection assignment field.

Programming

Mode 21 - Continued

Available Options

Drop – The motor will stop as soon as the product is detected after the first complete revolution.

Home – The motor will home before stopping.

Off – Golden Eye is disabled, the motor will stop as soon as it reaches home whether a product has been delivered or not.

See page 3.04 for a complete description of the function of the Golden Eye Guaranteed Delivery System.

Special Actions

- ◆ The * key may be used as a wildcard to set the entire rows (12*) or the entire machine (1**).
- ◆ To delete all selections press the # key then the * key in sequence.

- ◆ **To home motors left off home in the DROP mode, open the door and press the mode switch, then close the door.**

Mode 22 – Bill Escrow Setup

Mode 22 is used to set the bill escrow option. To access this mode, press **22** on the numeric keypad.

Upon entering the bill escrow set up mode, the display will show the current bill escrow state in Field A. Use the # key to toggle between the available options in Field A. To exit this mode, press the **C** key or press the Service Switch.

Available options

First – The machine will hold the first bill deposited in escrow until a vend is initiated. Once a vend is initiated the bill must be stacked before the product will be dispensed. In this mode only one bill will be accepted. If the coin return is depressed, the bill will be returned to the customer.

Last – The machine will accept bills to the highest vend price. If the coin return is depressed the last bill inserted will be returned and all previous bills inserted will be returned in change.

Off – All bills accepted will be stacked immediately. If the coin return is depressed, change will be paid back.

Mode 22 – Bill Escrow Setup
Field A is the escrow setting field.

Programming

Mode 23 – Motor Pairing

Mode 23 is used to pair an even numbered motor with the next sequential odd numbered motor. To access this mode, press **23** on the numeric keypad.

Upon entering the motor pairing set up mode, the display will show "100 PAIRED TO". Use the numeric key pad to enter the even numbered motor to be paired in Field A. The odd numbered motor next in sequence will automatically appear in Field B. Use the ◀ or ▶ keys to scroll through the list of paired motors. Use the # key to remove a previously paired combo. To exit this mode, press the **C** key or press the Service Switch.

Notes

- ◆ Only motors in the same row of a machine may be paired.
- ◆ All pricing, discounting and vending options are set using the selection number of the left motor in the pair.
- ◆ Any even number motor may be paired to the next odd numbered motor in sequence. (e.g. 110 will always be paired with 111, 112 with 113, etc)

Mode 24 – Winner Mode

Mode 24 is used to set the frequency that free items will be awarded during cash vends only. To access this mode, press **24** on the numeric key pad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the Winner Mode, the display will show the current winner setting in Field A. Use the numeric key pad to enter the number of vends between winners up to 9999, then toggle to Field B, use the # key to turn the Winner Mode on (Y) or off (N). To exit this mode, press the **C** key or press the Service Switch.

When a customer wins, the credit will be returned the beeper will sound 5 times and the display will show "WE HAVE A WINNER!!".

Notes

- ◆ Vends made while on free vend, test vend or the second vend of a combo vend are not counted for the purpose of determining the winner.
- ◆ Setting the number to 0000 will result in every vend being a winner.

Mode 23 – Motor Pairing

Field A is the even motor number to be paired.

Field B is the odd number motor to be paired this number will automatically appear once a selection is entered in field A.

Field C is the instructions to remove a previously set motor pair.

Mode 24 – Winner Mode

Field A is the number of vends between winners.

Field B is the winner on/off field.

Programming

Mode 25 – Force Vend Setup

Mode 25 is used to set the force vend option. To access this mode, then press **25** on the numeric keypad.

Upon entering the force vend mode, the display will show the current force vend state. Use the **#** key to toggle between on and off in Field A. To exit this mode, press the **C** key or press the Service Switch.

Available options

On – The customer must purchase an item before any credit will be returned.

Off – The customer may receive their money back at any time.

Notes

- ◆ Force vend does not apply to the use of debit cards or to bills held in escrow, only to non-tube coins.

Mode 26 – Multi-vend Setup

Mode 26 is used to set the multi-vend option. Multi-vend allows the customer to make an additional selection using the change amount due from the prior vend. To access this mode, **26** on the numeric keypad.

Pressing either the **◀** or **▶** key will allow you to toggle back and forth between the fields.

Upon entering the multi-vend mode the display will show the current multi-vend state. Use the **#** key to toggle between on and off, then toggle to Field B to change the time-out setting, the default setting is 30 seconds if a larger time-out setting is desired use the numeric key pad to enter the larger time. To exit this mode, press the **C** key or press the Service Switch.

Available options

On – Allows customer to make additional selections as long as sufficient credit exists to purchase the lowest priced item in the machine. The customer may establish additional credit at any time when in this mode. If the customer presses the coin return lever, or the amount of available credit drops below the lowest price in the machine or the time-out expires, change is returned regardless of the state of multi-vend.

Off – Change will be returned immediately after the sale.

Mode 25 – Force Vend Setup
Field A is the force vend on/off field.

Mode 26 – Multi-vend Setup
Field A is the multi-vend on/off field.
Field B is the time-out field; the default time is 30 seconds. The available range is 5 to 90 seconds.

Programming

Mode 27 – Combo Vend Setup

Mode 27 is used to set the combo vend feature. A combo vend allows you to set up a selection to be offered in conjunction with another selection. To access this mode, press **27** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the combo vend mode the display will show the current combo vend state. Use the # key to toggle between on (Y) and off (N) in Field A, then toggle to Field B use the numeric key pad to set the time out value in seconds. The time-out value is the number of seconds the customer has to add additional credit in order to purchase a combo vend combination. Then toggle to Field C use the # key to set a unique number for the combination, this number is settable from 0 to 9 allowing for 10 different combinations at any 1 time. Then toggle to Field D and use the numeric key pad to set the item that is to be selected by the customer, then toggle to Field E and use the numeric key pad to select the item to be offered in combination with the customer selected item. Then toggle to Field F and use the numeric key pad to set the discount amount of the combination item. Then toggle to Field G and use the # key turn the selected combination vend on (Y) or off (N). To exit this mode, press the **C** key or press the Service Switch.

Notes

- ◆ Setting the discount amount in Field F to \$99.99 will allow the discounted item to be vended for free.
- ◆ Wild carding with the * key is not allowed in the combo vend.
- ◆ When combo vend is active, the display will scroll the message **“FEATURED ITEM *** BUY XXX AND SAVE \$ ON YYY”**.

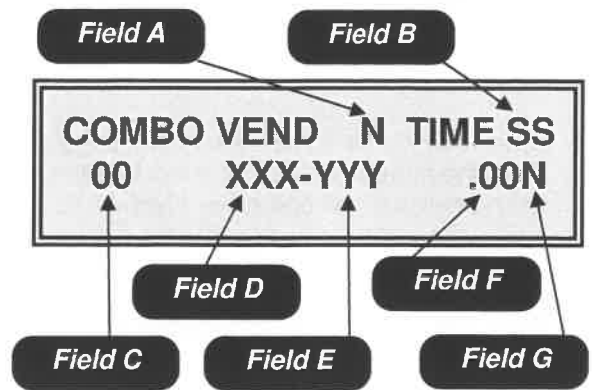

Mode 28 – Free Vend Option

Mode 28 is used to set the free vend option. To access this mode, press **28** on the numeric keypad.

Upon entering the free vend option mode the display will show the current free vend state. Use the # key to toggle the free vend on or off in Field A. To exit this mode, press the **C** key or press the Service Switch.

Note

- ◆ Free vend applies to the entire machine.

Mode 27 – Combo Vend Setup

Field A is the global combo vend on/off field.

Field B is the time-out field measured in seconds.

Field C is the number assigned to the combo vend.

Field D is the item selected by the customer.

Field E is the item to be vended in combination with the customer selected item.

Field F is the discount amount of the combination item.

Field G allows the user to turn the combination item on or off, but leave the rest of the combination vends in use.

Mode 28 – Free Vend Option

Field A is the free vend option on/off field.

Programming

Mode 29 – Free Vend Coupon

Mode 29 is used to set the free vend coupon or token option. To access this mode, press **29** on the numeric keypad.

Upon entering the free vend coupon mode the display will show Free Vend Coupon XXX in Field A, where XXX is the selection enabled for the free vend coupon. Each selection enabled for the free vend coupon is shown in sequence in Field A by depressing the ◀ or ▶ key. Use the numeric keypad to add selections. To remove a selection, press the # key while the selection number is displayed. To exit this mode, press the C key or press the Service Switch.

Special Actions

- ◆ The * key may be used as a wildcard to set entire rows (12*) or the entire machine (1**).

Mode 30 – Chip Retrieve/Store Mode

Mode 30 is used to retrieve or store information from the touch memory button (CHIP). To access this mode, press **30** on the numeric keypad.

To store all programmable information to CHIP press the * key as shown in Field B. To upload information previously stored on a CHIP press the # key as shown in field C. To exit this mode, press the C key or press the Service Switch.

- ◆ **To make sure that the information being transferred from the CHIP is compatible the software revision numbers will be compared before the transfer. If the version on the CHIP is not compatible the transfer is canceled and the display will show “CHIP NOT COMPATIBLE”.**

Mode 29 – Free Vend Coupon
Field A is the selection enabled field.
Field B is the selection remove field.

Mode 30 – Chip Retrieve/Store Mode
Field A is the name of the mode.
Field B is the download to CHIP function.
Field C is the upload from CHIP function.

Programming

Mode 31 – Change Payback Type

Mode 31 is used to set the change payback option. To access this mode, press **31** on the numeric keypad.

Upon entering the change payback mode, the display will show the current change payback state in Field A. Use the **#** key to toggle through the available options. To exit this mode, press the **C** key or press the Service Switch.

Available options

LEAST – The least amount of coins will be paid back.

LVL3 – The coin changer makes the payback decision based on how much money it thinks is in each tube. You should use the “Tube Fill” menu item (Mode 10) when you use this option.

Mode 32 – Selection Lockout

Mode 32 is used to lock selections from use in conjunction with an external switch. To access this mode, press **32** on the numeric keypad.

Upon entering the lockout mode the display will show LOCK SELECTION XXX in Field A. Where XXX is the selection enabled for lock out. Use the ◀ or ▶ key to scroll through each selection affected by the lockout. Use the numeric key pad to add selections. Use the **#** key while the selection number is displayed to remove selections. To exit this mode, press the **C** key or press the Service Switch.

Special actions

- ◆ The * key may be used as a wildcard.
- ◆ If all selections are disabled the lights will turn off and no money will be accepted.

Note

- ◆ The mechanical lockout of selections is done by adding an external key switch or other switch across pins P2-3 & P2-4 on the logic board.
- ◆ The machine will not function properly in shutdown when the door is open. The machine must **not** have the shut down switch active while the door is open.

Caution: Never apply voltage to these pins.

Mode 31 – Change Payback Type

Field A is the payback option selection field.

Mode 32 – Selection Lockout

Field A is the selection disable field.

Field B is the selection remove field.

Programming

Mode 33 – Set Spiral Count

Mode 33 is used to set the Spiral Count. Spiral Count allows you to program the number of spaces in each spiral. When a selection has vended all product out of the individual spiral, the display will show "SOLD OUT". To access this mode, press **33** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the set spiral count mode the controller will display SPIRAL CNT OFF/ON in Field A. Use the # key to toggle between OFF/ON. If Field A is set to off no further action is needed.

If Field A is set to ON, Toggle to Field C and use the numeric key pad to enter the spiral count. Then toggle back to Field B and enter the selection numbers that correspond to the spiral count set in Field C. Repeat the above steps for each selection. To exit this mode, press the **C** key or press the Service Switch.

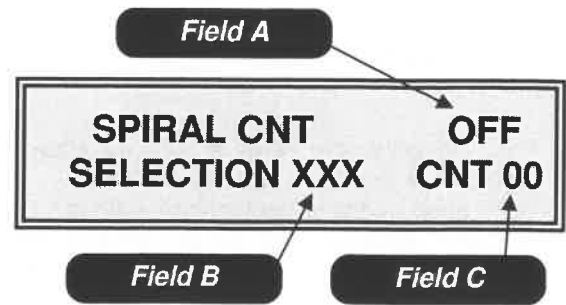

When Spiral Count is ON (Field A), each time the main cabinet door is opened, the display will prompt "STOCK MACHINE -Y". Pressing the # key with the Y showing will reset the spiral counts. Closing the door without pressing the # key, the sold out status of each spiral remains.

Special actions

- ◆ The * key can be used as a wildcard in Field B to set entire rows (12*) or the entire machine (1**).
- ◆ To disable a selection from spiral count set Field C to 0.

Note

- ◆ If this function is enabled, route service personnel must be instructed in its correct operation. Failure to correctly reset the counts will result in a full machine from vending properly.

Mode 33 – Set Spiral Count

Field A is the spiral count on/off field.

Field B is the item selection field.

Field C is the spiral count field.

Programming

Mode 34 – Speech / Chime

Mode 34 is used to set the Speech/Chime options. To access this mode, press **34** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the speech/chime options mode, the controller will display the current SPEECH setting in field A and the current CHIME setting in Field B. The # key is used to toggle between on and off for each field. To exit this mode, press the C key or press the Service Switch.

Notes

- ◆ Turning the chime off will disable the beep from sounding in all conditions, except for the health code warning set in Mode 42.
- ◆ When speech is on, all messages in the service mode will be transmitted via the DEX port for use with an audio interface.
- ◆ When speech is on, the DEX/UCS port can no longer be used for any other communication.

Mode 35 – Security

Mode 35 is used to set the Security options. To access this mode, press **35** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the security mode, the current security settings will be displayed. Use the numeric key pad to set the desired security code in Field A, then toggle to Field B, use the # key to toggle between on (Y) and off (N). To exit this mode, press the C key or press the Service Switch.

With the security code, the service person will only be allowed access to Modes 01 to 04. Trying to enter any other modes will change the display to “ENTER SECURITY CODE”. Once the proper code has been entered all modes in the machine will be accessible until the service mode is exited.

Note

- ◆ Factory default settings are off (N) and a security code of 1111.
- ◆ **Once the service mode has been exited, the code must be re-entered to access Modes 05 through 84.**

Mode 34 – Speech/Chime
Field A is the speech option field.
Field B is the chime option field.

Mode 35 - Security
Field A is the security code entry field.
Field B is the security on/off field.

Programming

Mode 36 – Space to Sales

Mode 36 is used to set two columns to run together in a Space to Sales manner. To access this mode, press **36** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the Space to Sales mode, the display will show the current Space to Sales settings. Use the # key in Field A to turn the Space to Sales feature on (Y) or off (N). Toggle to Field B and use the # key to set a unique number for the space to sales combination. This number is settable from 0 to 9 allowing for 10 different Space to Sales combinations at any one time. Toggle to Field C and use the numeric key pad to set the first item number to be vended in a space to sales manner, then toggle to Field D and use the numeric key pad to set the second item number to be vended in a space to sales manner. Toggle to Field E, and use the # key to turn the selection numbers set in Field B to on (Y) or off (N). To exit this mode, press the **C** key or press the Service Switch.

◆ **Space to sales allows you to program two selection spirals to operate as one in an alternating method. For example if selection 110 is entered into Field C and selection 112 is entered into Field D, every time selections 110 or 112 are selected the product will be vended from spiral 110 one time and 112 the next time. It is important that any selections enabled in this mode contain the same product. The goal of space to sales is to increase the capacity of an individual item while preventing the inevitable empty spiral from occurring on a fast moving product.**

Mode 37 – Set Max Payout Mode

Mode 37 is used to set the Maximum Payout options. To access this mode, press **37** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the maximum payout mode, the controller will display the current max payout setting.

Toggle to Field A use the numeric key pad to set the maximum value of coins to be returned, then toggle to Field B and use the # key to turn on (Y) or off (N) the option. To exit this mode, press the **C** key or press the Service Switch.

Note

◆ When turned on (Y), if the credit after the sale is greater than the Max Payout set point in Field A, the machine will go into an automatic multi-vend (mode 26).

Mode 36 – Space to Sales

Field A is the space to sales on/off field.

Field B is the product type number field.

Field C is the first selection setting field.

Field D is the second selection setting field.

Field E is the product type on/off field

◆ **Caution – Space to Sales items must be priced identically.**

Mode 37 – Set Max Payout

Field A is the maximum coin payout field.

Field B is the maximum coin payout on/off field.

Programming

Mode 40 – Set Temperature

Mode 40 is used to set the Temperature of the cabinet(s). To access this mode, press **40** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering mode 40, the display will show the current temperature range setting. Field A is the cabinet selection field, use the # key to choose between 1 (cabinet 1) or 2 (cabinet 2). Toggle to Field B to choose the temperature range option - see below for the available options. Then toggle to Field C to set the temperature for the chilled cabinet. Use the 1 key to raise or the 2 key to lower the temperature. Then toggle to Field E; use the # key to choose between Fahrenheit (F) and Celsius (C) temperature scales. To exit this mode, press the C key or press the Service Switch.

Field B Temperature Range Options

AMBIENT – No temperature control. Field C will show ----- F.

ZONE – The target temperature in Field C for each zone in the machine is settable from +36° to +80° F (4° to 21° C). This setting is only available if Field A is set to cabinet 1, and should only be used when selling non-perishable products. See page 2.02 for additional information.

FOOD – The target temperature in Field C is fixed at +36° F (2° C). This setting is used when the whole cabinet or a portion of it contains perishable product. When used in an AP6500 with a barrier, shelves located lower than the barrier must be enabled for Health Code in Mode 42 – see page 5.20

FROZEN – The target temperature range in Field C is settable from -15° to +10° F (-12° to -26° C) – Only applies to an external cabinet (AP960 or AP320)

◆ All temperature ranges have a + or – range of 3° F (2° C).

◆ The temperature inside the machine can be viewed from the outside by pressing and holding the * key for °F or # key for °C.

Mode 40 – Set Temperature for Cabinet 1

Field A is the cabinet selection field.

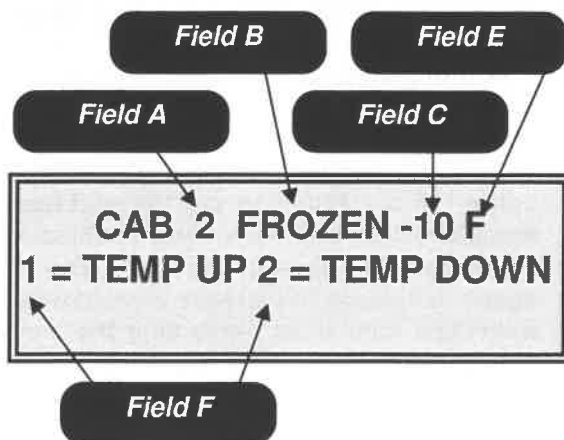

Field B is the temperature range selection field.

Field C is the temperature setting field for the cabinet in the AP6500.

Field D is only used on a dual zone machine, and is not used in the AP6500

Field E is the temperature scale field, F for Fahrenheit or C for Celsius.

Field F is the instructions for raising and lowering the temperature.

Mode 40 – Set Temperature for Cabinet 2

Field A is the cabinet selection field.

Field B is the temperature range selection field.

Field C is the temperature setting field. The default setting for frozen is -10° F.

Field D is the temperature scale field, F for Fahrenheit or C for Celsius.

Field F is the instructions for raising and lowering the temperature.

All items located above the barrier assembly must be non-perishable!

Programming

Mode 41 – Defrost

Used on Models 320/960 only!

Mode 41 is used to set the Defrost schedule and to start a Manual Defrost on 320/960 cabinets(s) only. The defrost on the Zone Combo is automatic; for more information on the Zone Combo defrost refer to the refrigeration process page 2.02. To access this mode, press **41** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the Defrost setup mode, the display will show the current defrost settings. **Field A** is the cabinet selection field, use the # key to choose between cabinet 1 (1) or cabinet 2 (2). Then toggle to **Field B**, use the # key to set the defrost start time, in the 24 hour format. Then toggle to **Field C**, use the # key to choose between 6 or 8 hour time intervals between defrosting. To start an immediate defrost push the * key, the display will show “Defrost Starts in 2 Minutes”. To exit this mode, press the **C** key or press the Service Switch.

Mode 42 – Health Shutdown

Mode 42 is used to set the health shutdown options for the cabinet(s). To access this mode, press **42** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

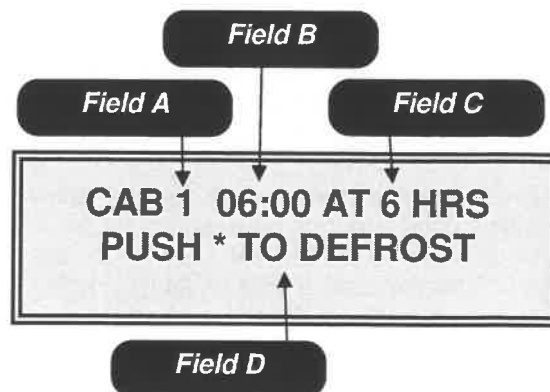

Upon entering the health shutdown mode, the display will show the current health shutdown state. Use the numeric key pad to enter the selection numbers to be “health controlled” in **Field A**. Toggle to **Field B**, use the # key to turn the health shutdown on or off for the selected items. Repeat the above steps for each selection. If you would like a chime to sound when a health shutdown has occurred toggle to **Field C**, use the # key to turn the chime on or off. To exit this mode, press the **C** key or press the Service Switch.

Special actions

- ◆ The * key can be used as a wildcard in **Field A** to set entire rows (12*) or the entire machine (1**).

◆ If shelf is out of order due to health code, no message is posted until a selection is made. Once selection is made the display will say “Make Another Selection”.

◆ If the machine detects a Health Code error and the chime feature is ON the control board will sound a double beep every 30 seconds until the Health Code error is corrected.

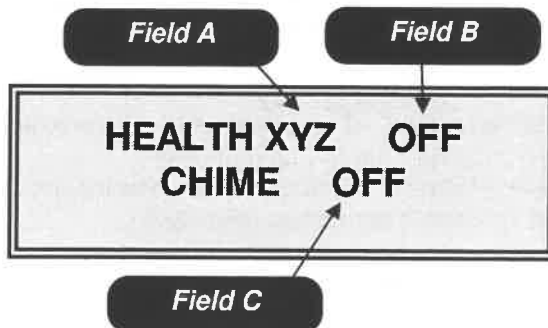

Mode 41 - Defrost

Field A is the cabinet selection field.

Field B is the time in the 24 hour format to start the defrost cycle.

Field C is the interval in hours between each defrost cycle settable to 6 or 8.

Field D is the information to start an immediate defrost cycle.

Mode 42 – Health Shutdown

Field A is the item selection field.

Field B is the health shutdown on/off field.

Field C is used to turn on/off the health shutdown notification chime.

Programming

Mode 50 – Current Time

Mode 50 is used to set the current time date, date format and daylight saving options. To access this mode, press **50** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the Current Time mode, the display will show the current time (in 24 hour military time) and date settings. Use the numeric key pad to change the hour setting in Field A, then toggle to Field B and use the numeric key pad to set the minutes. Press the # key to set the time. Toggle to Field C, use the numeric key pad to set the month, then toggle to Field D, use the numeric key pad to set the day, then toggle to Field E, use the numeric key pad to set the year. Use the # key to save the date. Toggle to Field F; use the # key to choose the date format from the available options shown below. Toggle to Field G to change the daylight savings time zone setting using the available options shown below. To exit this mode, press the **C** key or press the Service Switch.

◆ **You must press the # key each time to save any changes to the time or date!**

Field F available options

MONTH/DAY – This option will show the date in the Month/Day/Year format (mmddy).

DAY/MONTH – This option will show the date in the Day/Month/Year format (ddmmy).

Field G available options

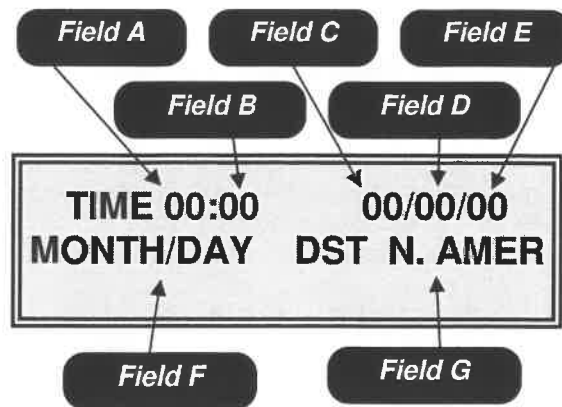

OFF – Does not follow daylight savings time.

N.AMER – Will automatically adjust to North American daylight savings time with a 1 hour increase on the 2nd Sunday in March and a 1 hour decrease the 2nd Sunday in November.

UK/EUR – Will automatically adjust to European daylight savings time with a 1 hour increase on the last Sunday in March and a 1 hour decrease on the last Sunday in October.

AUSLIA – Will automatically adjust to Australian daylight savings time with a 1 hour increase on the last Sunday in October and a 1 hour decrease on the last Sunday in March.

◆ **North American Daylight Savings Time was changed in revision 20 software to follow the new daylight savings times enacted in 2007.**

Mode 50 – Current Time

Field A is the hour setting field (24 hour military time).

Field B is the minute setting field.

Field C is the month setting field.

Field D is the day setting field.

Field E is the year setting field.

Field F is the date format field.

Field G is the daylight savings selection field.

It is recommended that the battery be replaced every 5 years.

Programming

Mode 51 – Timed Shutdown

Mode 51 is used to set timed machine shutdown periods. The shutdown periods affect the ability of the machine to vend and the appearance of the machine. To access this mode, press **51** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the timed shutdown mode, the display will show the current shutdown setting. Use the # key in Field A to set the shutdown period number; this number may be set from 1 to 4 allowing for up to 4 different shutdown time periods per week. Toggle to Field B using the numeric key pad set the beginning hour then toggle to Field C and set the beginning minute (using 24 hour military time). Toggle to Field D using the numeric key pad set the ending hour then toggle to Field E to set the ending minute (using 24 hour military time). Toggle to Field F use the ◀ or ▶ keys to scroll between the days of the week, choosing which days the shutdown will occur on, use the # key to turn the days on (UPPERCASE) or off (lowercase). Toggle to Field G press the # key to reach screen 2. Field A on screen 2 references Field A on Screen 1 and should not be changed. Toggle to Field H use the # key to turn the shut down period on (Y) or off (N). Toggle to Field I use the # key to set the shutdown type from the available options shown below.

Field I available options

LIGHTS OFF – this option is used to shut down the lights only. The machine will function in all other ways.

VEND OFF – this option shuts down the lights, disables vending by selection and if all selections are disabled credit acceptance will also be disabled.

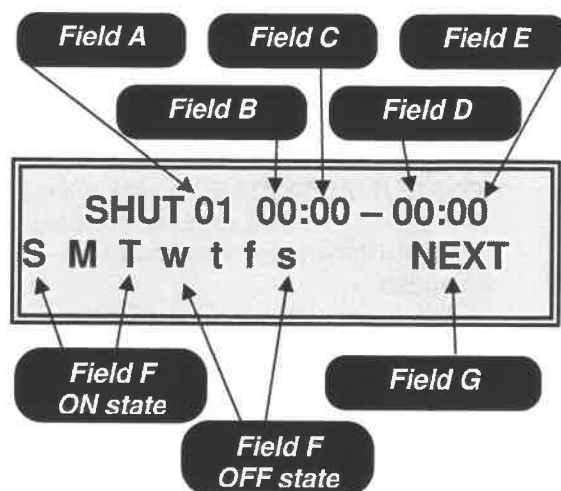

LOW ENERGY – this option will shut down the lights, vending will be allowed. In cabinets without health control enabled the temperature will be allowed to rise 5 degrees above the set point during the shut down period.

TOT SHTDWN – this option will shut down the lights, compressor (in non health control machines), vending, credit acceptance and the display.

Toggle to Field J use the numeric key pad to enter the selection number the shutdown applies to, toggle to Field K and use the # key to change the N to Y, then toggle back to Field J and enter the remaining selections. You may use the # key while in Field J to scroll through the previous set selections. Field L may be used to return to Screen 1. To exit this mode, press the **C** key or press the Service Switch.

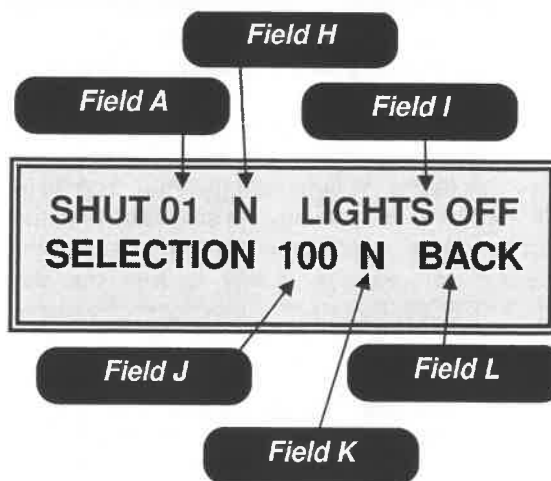

Special Actions

- ◆ The * key can be used as a wildcard in Field J to set entire rows (12*) or the entire machine (1**).

Mode 51 – Timed Shutdown Screen 1

Field A is the shutdown number selection field.
Field B is the shutdown starting hour set field.
Field C is the shutdown starting minute set field.
Field D is the shutdown ending hour set field.
Field E is the shutdown ending minute set field.
Field F is the day of the week selection field. In this example Sunday, Monday and Tuesday are ON and Wednesday, Thursday, Friday and Saturday are OFF.
Field G is the move to the next screen field.

Mode 51 – Timed Shutdown Screen 2

Field A is a reference to Field A on screen 1 and should not be changed.
Field H is the shutdown on/off field.
Field I is the shutdown type field.
Field J is used to select item numbers for the shutdown.
Field K is used to add/remove items from the shutdown.
Field L is used to return to screen 1 in mode 51.

Use of low energy or total shutdown in any machine with perishable products is not allowed.

Programming

Mode 51 – Continued

Note

- ◆ When the shutdown activates and only a portion of the machine is shut down, the display will scroll the message “SELECTION XXX XXX XXX NOT AVAILABLE” where XXX are the selections shut down, only 10 selections can be displayed if there are more than 10 a + sign will be added.
- ◆ In the Vend Off mode, if all selections are disabled the display will read “MACHINE USE NOT ALLOWED UNTIL HH:MM” where HH:MM is the time the shutdown is scheduled to shut off in Field B.
- ◆ Shutdown times in Field B and C must stay within a 24 hour clock: 00:00 to 23:59.

Mode 52 – Timed Discount

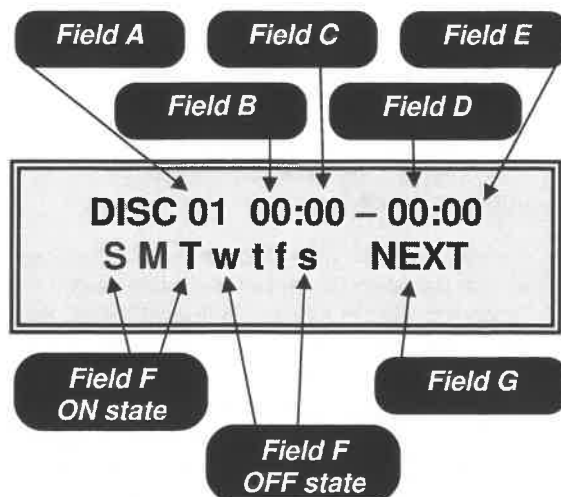

Mode 52 is used to set timed discounts. To access this mode, press **52** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle between the fields.

Upon entering the timed discount mode, the display will show the current timed discount settings. Use the # key in Field A to set the discount time period number; this number may be set from 1 to 4 allowing for up to 4 different discount periods per week. Toggle to Field B using the numeric key pad set the beginning hour then toggle to Field C and set the beginning minute (using 24 hour military time). Toggle to Field D using the numeric key pad set the ending hour, then toggle to Field E to set the ending minute (using 24 hour military time). Toggle to Field F, using the ◀ or ▶ keys to scroll between the days of the week, choosing which days the discount will occur on, use the # key to turn the days on (UPPERCASE) and off (lowercase). Toggle to Field G press the # key to reach screen 2. Field A on screen 2 references Field A on Screen 1 and should not be changed. Toggle to Field H use the # key to turn the discount period on (Y) or off (N). Toggle to Field I, and use the numeric key pad to set the discount dollar amount. Toggle to Field J use the numeric key pad to enter the selection number to be discounted, toggle to Field K and use the # key to change the N to Y, then toggle back to Field J and enter the remaining selections. You may use the # key while in Field J to scroll through the previous set selections. Field L may be used to return to Screen 1. To exit this mode, press the **C** key or press the Service Switch.

Special Actions

- ◆ The * key can be used as a wildcard in Field J to set entire rows (12*) or the entire machine (1**).

Mode 52- Timed Discount Screen 1

Field A is the timed discount number selection field.

Field B is the timed discount starting hour set field.

Field C is the timed discount starting minute set field

Field D is the timed discount ending hour set field.

Field E is the timed discount ending minute set field.

Field F is the day of the week selection field. In this example Sunday, Monday and Tuesday are ON and Wednesday, Thursday, Friday and Saturday are OFF.

Field G is the move to the next screen field

Mode 52 – Timed Discount Screen 2

Field A is a reference to Field A on screen 1 and should not be changed.

Field H is the timed discount on/off field.

Field I is the discount amount field.

Field J is used to select item numbers for the timed discount.

Field K is used to add additional selection numbers to the timed discount list.

Field L is used to return to screen 1 in mode 52.

Programming

Mode 52 – Continued

Note

- ◆ When the discount period becomes active, the display will scroll "SAVE \$.XX ON YYY YYY YYY" where xx is the dollar amount set in Field H and YYY is the items selected in Field I. A maximum of 10 selections will be displayed if more than 10 items a + will be added.
- ◆ Shutdown times in Field B and C must stay with in a 24 hour clock: 00:00 to 23:59.

Mode 53 – Timed Messages

Mode 53 is used to set timed user messages. To access this mode, press **53** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the timed user message mode, the display will show the current timed user message state. Use the # key in Field A to set the timed user message period number; this number may be set from 1 to 5 allowing for up to 5 different timed message periods per week. Toggle to Field B using the numeric key pad set the beginning hour then toggle to Field C and set the beginning minute (using 24 hour military time). Toggle to Field D using the numeric key pad set the ending hour then toggle to Field E and set the ending minute (using 24 hour military time). Toggle to Field F using the ◀ or ▶ keys to scroll between the days of the week, choosing which days the message will occur on, use the # key to turn on (UPPERCASE) or of (lowercase) the desired days. To exit this mode, press the C key or press the Service Switch.

Note

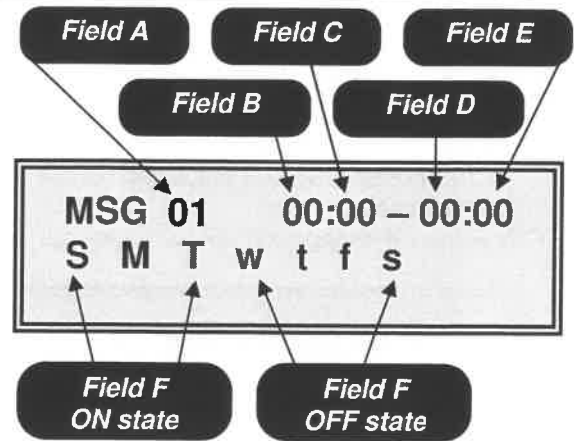

- ◆ The times in Field B and C must stay with in a 24 hour clock (00:00 to 23:59).
- ◆ A user message must be set in Mode 60 before a timed message can be set. If no user messages are set, the default user message described in Mode 60 will be displayed.

Mode 60 – User Message

Mode 60 is used to set a user message. To access this mode, press **60** on the numeric keypad.

Pressing either the ◀ or ▶ key will allow you to toggle back and forth between the fields.

Upon entering the user message mode, the display will show the current user message state. Use the # key in Field A to select the user message number; this number may be set from 1 to 4 allowing for up to 4 programmable user messages. Toggle to Field B to select which line your message will be displayed on. Use the # key to choose from one of the available options shown below.

Mode 53 – Timed Messages

- Field A** is the message select field.
- Field B** is the starting hour in 24 hour military time.
- Field C** is the starting minute in 24 hour military time.
- Field D** is the ending hour in 24 hour military time.
- Field E** is the ending minute in 24 hour military time.
- Field F** is the day selection field. In this example Sunday, Monday and Tuesday are on and Wednesday, Thursday, Friday and Saturday are off.

Field D is date field.

Programming

Mode 83 – Temperature Log

Mode 83 is used to view the temperature log. To access this mode, press **83** on the numeric keypad.

Upon entering the temperature log mode, the display will show the current temperature. Field A shows the cabinet and zone the data is referencing (in this example C1L is the lower zone of a refrigerated machine). Field B is the total minutes since the temperature was last taken. Field C shows the temperature. Field D shows the status of the refrigeration unit at the time the temperature was taken. See the list below for the available options for Field D.

Available Options

- R** – Refrigeration was on.
- D** – Defrost was on.
- O** – Refrigeration was off.

Use the **◀** key to view the previous temperature samples which have been taken in 1 minute intervals. When the last sample is reached the display will show 'NO MORE TEMPS' in the first line and Field E will scroll the message "TO CLEAR TEMPS PUSH # THEN * TO RUN REFRIDGERATION TEST PUSH 1". To clear the temperature log press # then *. To run the refrigeration test push the **1** key. The display will change to "REF TEST ACTIVE". Upon completion of the test the display will show either

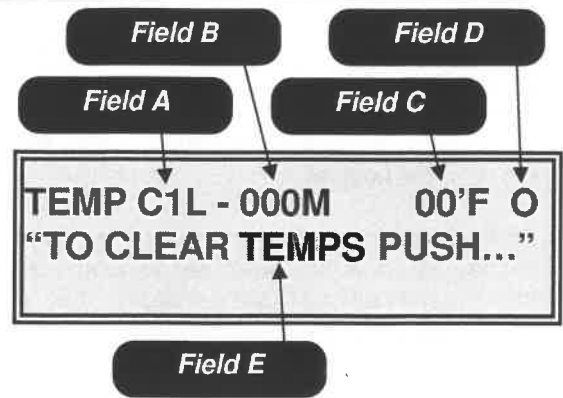

"REFER TEST PASS" or "REFER TEST FAIL". To exit this mode, press the **C** key or press the Service Switch.

◆ **The chime will sound 3 times when there are no more items to display.**

Mode 84 – Baffle Door Test

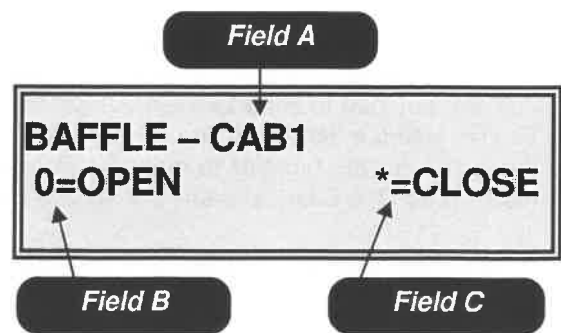

Mode 84 is used to test the baffle doors. To access this mode, press **84** on the numeric keypad.

In Field A use the # key to select which cabinet to perform the baffle test on. Press the **0** key to open the baffle door shown in Field B. Press the * key to close the baffle door shown in Field C. To exit this mode, press the **C** key or press the Service Switch.

Mode 83 – Temperature Log

- Field A** is the cabinet and zone indicator.
- Field B** is the total minutes since the temperature was last taken.
- Field C** is the temperature.
- Field D** is the status of the refrigeration unit at the time the temperature was recorded.
- Field E** is the scrolling instruction field.

Mode 84 – Baffle Door Test

- Field A** is the cabinet selection field.
- Field B** is the open baffle door key.
- Field C** is the close baffle door key.

Programming

Mode 85300 – Set Serial Number

Mode 85300 is used to set a serial number for retrieval during a print out or in the DEX data information. To access this mode, press **85300** on the numeric keypad.

Upon entering the set serial number mode, the display will show the current set serial number. Use the numeric key pad to set a serial number (up to 17 characters in length). When done editing, press **#** to save the number to memory. To exit this mode, press the **C** key or press the Service Switch.

◆ **This field appears in a DEX file as ID101**

Mode 86200 – Set Machine ID

Mode 86200 is used to set a serial number for retrieval during a print out or in the DEX data information. To access this mode, press **86200** on the numeric keypad.

Upon entering the set machine ID mode, the display will show the machine ID number that is currently set. Use the numeric key pad to set a machine ID number up to 20 characters in length. When done editing, press the **#** to save the number to memory. To exit this mode, press the **C** key or press the Service Switch.

◆ **This field appears in a DEX file as ID106**

Mode 87400 – Set Location ID

Mode 87400 is used to set a location ID number for retrieval during a print out or in the DEX data information. To access this mode, press **87400** on the numeric keypad.

Upon entering the location ID mode, the display will show the current location ID number. Use the numeric key pad to set a location ID number up to 20 characters in length. When done editing, press the **#** to save the number to memory. To exit this mode, press the **C** key or press the Service Switch.

◆ **This field appears in a DEX file as ID104**

Mode 85300 – Set Serial Number
Field A is the serial number set field.

Mode 86200 – Set Machine ID
Field A is the machine ID number set field.

Mode 87400 – Set Location ID
Field A is the location ID number set field.

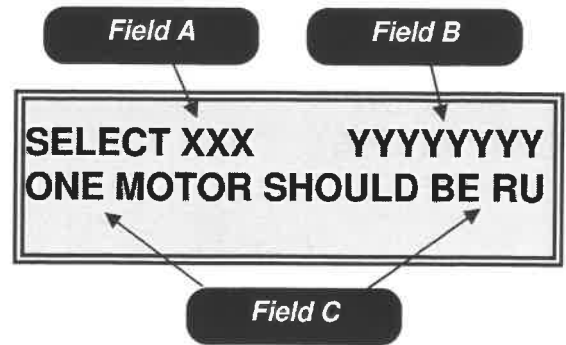

Programming

Mode 88123456790 – Factory Test

Mode 88123456790 is used to run a factory test. To access this mode, press **88123456790** on the numeric keypad.

After entering the factory test mode, the machine will automatically test the first vend motor, you must then press the # key to advance to the next motor to be tested. If a vend motor is not present or is bad, the test will stop and the display will flash in Field B one of the following: MISSING, OVER CURRENT or TIMEOUT. To continue with the test press the # key. Once the test is complete all options and prices will be reset to factory defaults.

◆ **Using this mode on a machine full of product will cause one of each item to vend.**

Mode 88123456790 – Factory Test

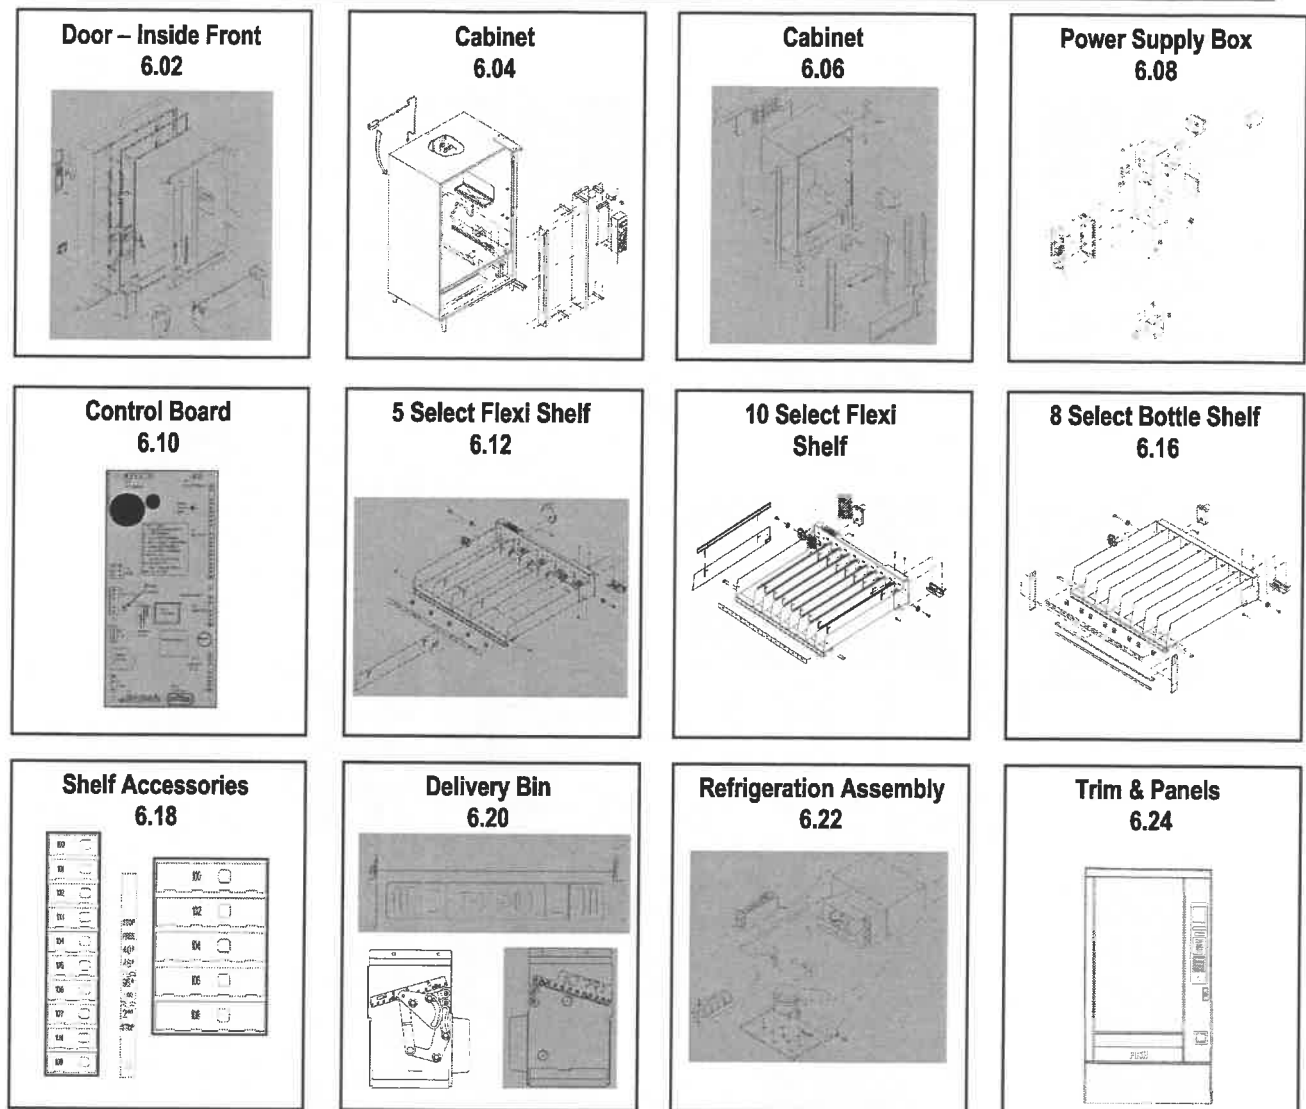

Field A is the vend motor that is being tested.

Field B is the test information field.

Field C is the scrolling information field.

Parts

HOW TO ORDER PARTS

1. Refer to the machine breakdown above. Each assembly breakdown contains an item description and page location in this parts manual.
2. Determine part number(s) needed by referring to drawing of part. Locate item number from drawing and refer to item number, part number and description.
3. Complete your parts order, double check part numbers and quantities. Include a call back number in the event there is a question regarding your order. Fax, email or mail your order to your authorized AP distributor or AP.
4. Specify how you would like your order to be shipped. If you do not specify, we will ship the most economical way. In the case of warranty replacements, we reserve the right to determine the method of shipment.

Should you have questions pertaining to this manual or the vendor, please contact your AP distributor or write directly to:

32	Screw, 8-36 UNF x 3/8, HWH W/Serrations	80030527	

Note: Parts shown for identification without part numbers in columns are not sold separately.

Service

AP6500 Refrigeration unit removal instructions

- 1) Power off machine, disconnect plug from wall, disconnect the 4 pin connector from the bottom of the power box.

Note: **1** Indicates Instruction Step

- 2) Empty and remove second shelf up from the bottom of the machine.
- 3) Loosen and remove the 2 large thumbscrews holding the lower barrier in place. Set barrier and hardware aside.
- 4) Push back on the tab on the air inlet screen, and remove screen from machine.
- 5) Disconnect shelf harness from control board.
- 6) Remove large foam plug from bottom of foam barrier.
- 7) Reach between rails on right side of machine, and disconnect the 2 pin connector from the evaporator fan. Pull this harness out of the refrigerated compartment through the access hole.
- 8) Slide the silver temperature probe out of its mounting clamps, and pull completely out of the cabinet. Coil this harness carefully to ensure it does not get damaged during the removal process.
- 9) Undress the shelf harness and the compressor power harness from the clips on the right side wall.

Service

- 10) Cut or remove any tywraps securing the main power cord to the refrigeration tubing.
- 11) Pull the shelf harness into the cabinet and coil carefully on top of the bottom shelf.
- 12) Remove the 2 screws securing the compressor asm to the floor of the cabinet.
- 13) Remove the top center screw on the end of the evaporator coil.
- 14) Carefully slide the compressor asm forward, at the same time slide the evap coil forward off of its support brackets.
- 15) Continue sliding both parts forward until the evap coil has cleared the opening in the foam barrier.
- 16) Carefully support the unit (both the compressor and evaporator coil) until the unit is completely outside the machine.
- 17) Secure the evaporator coil to the side of the refrigeration unit cover for transport using the 2 screws provided.

Service

Zone Combo Paired Motor Shelf Conversion Instructions

These instructions provide the steps to convert two candy selections on a paired motor candy shelf to a single dual spiral snack selection, or visa versa.

Convert Two Candy Selections to One Snack

- 1) Remove product from 2 adjacent spirals – Left hand motor must be an even number.
- 2) Remove divider from between the 2 spirals.
- 3) Remove the selection number tabs from both selections
- 4) Remove one of the 2 scrolling price tabs rolls
- 5) Move the remaining scrolling price tab to position C on drawing below.
- 6) Store removed tabs and scrolling price roll in the service envelope, and retrieve the correctly numbered selection tab from the extras provided in the service envelope.
- 7) Install the new selection tab on the front of the shelf.
- 8) Count the number of spaces in each spiral to verify that they are the same. Change spiral if required.
- 9) Load product in selection.
- 10) Access Mode 23, and pair the motors
- 11) Access Mode 20, and set the new price, and adjust the scrolling price tab as required.
- 12) Test vend with money to ensure correct operation

Convert One Snack to Two Candy Selections

- 1) Remove product from spirals.
- 2) Install divider between the 2 spirals, between positions B & C.
- 3) Remove the selection number tab from the selection.
- 4) Remove the scrolling price roll.
- 5) Locate the extra selection tabs and scrolling price rolls in the service envelope, and retrieve the correctly numbered selection tabs and a scrolling price roll from the service envelope.
- 6) Install the scrolling price rolls in positions B and D.
- 7) Install the two selection tabs on the front of the shelf in positions A, B and C, D
- 8) Load product in selections.
- 9) Access Mode 23, and disable the paired motors.
- 10) Access Mode 20, and set the new price for both selections, and adjust the scrolling price tabs as required.
- 11) Test vend with money to ensure correct operation

Service

The Flexi Shelf has the ability to convert 3 candy selections into a single paired motor selection. The instructions to do this are below. When doing this conversion keep in mind the following 3 rules.

1. There must be a grey motor on the left and a white motor on the right.
2. The selection number used will be the lowest even number used in the pairing.
3. The wire number on the left motor must match the last digit of the selection number used.

Convert Three Candy Selections to One Dual Selection

- 1) Remove shelf from the machine and place on a sturdy surface.
- 2) Remove the product from 3 adjacent spirals.
- 3) Remove the dividers from between the 3 spirals, dividers 2 & 3 in the drawing below.
- 4) If the left most motor of the 3 has a white spiral retainer follow instructions 5 through 14 below. If the left most motor of the 3 has a grey spiral retainer follow instructions 15 through 24 below.
- 5) Remove the spirals and spiral retainers from motors A & B in the drawing below.
- 6) Disconnect wires and remove the selection motor position A in the drawing below. Tape and secure these wires.
- 7) Relocate motor B to position A in the drawing below. Reinstall the grey spiral retainer on this motor.
- 8) Reinstall spiral; count the number of spaces in each spiral to verify that they are the same. Change spiral if required.
- 9) Remove the selection number tabs in positions A & C in the drawing below. Turn them around and reinstall them with the blank side out.
- 10) Set the 2 outer price scrolls in positions A & C in the drawing below to the blank position. The blank position is located just before the word stop at the beginning of the scroll.
- 11) Load product in selection.
- 12) Access Mode 23, and pair the motors.
- 13) Access Mode 20, and set the new price, and adjust the scrolling price tab as required.
- 14) Test vend with money to ensure correct operation
- 15) Remove the spirals and spiral retainers from motors B & C in the drawing below.
- 16) Disconnect wires and remove the selection motor from position C in the drawing below. Tape and secure these wires.
- 17) Relocate motor B to position C in the drawing below. Reinstall the white spiral retainer on this motor.
- 18) Reinstall spiral; count the number of spaces in each spiral to verify that they are the same. Change spiral if required.
- 19) Remove the selection number tabs in positions B & C in the drawing below. Relocate the remaining selection tab from position A to position B in the drawing below. Turn the remaining 2 selections tabs around and reinstall them in positions A & C with the blank side out.
- 20) Set the 2 outer price scrolls in positions A & C in the drawing below to the blank position. The blank position is located just before the word stop at the beginning of the scroll.
- 21) Load product in selection.
- 22) Access Mode 23, and pair the motors.
- 23) Access Mode 20, and set the new price, and adjust the scrolling price tab as required.
- 24) Test vend with money to ensure correct operation

Troubleshooting

Error on display	Definition of Error	Possible Solutions
MOTOR ERRORS MOTOR XXX DIDNT HOME	Vend motor Time Out - XXX represents the selection motor	Motor left the home position, and never returned in the allotted time <ul style="list-style-type: none"> • Check for jammed product in spiral • Check for loose wire on motor
MOTOR XXX STALLED	Vend motor Over Current	While the motor was running, the current used by the motor exceeded a pre-set threshold <ul style="list-style-type: none"> • Check for jammed product in spiral
MOTOR XXX OFF HOME	Vend motor Not Home	After the motor has been scanned by the board, and checked for an "at Home" condition, the motor is still not at home <ul style="list-style-type: none"> • Check for a product jam
BAFFLE x CURRENT	Baffle Motor Over Current - X indicates which cabinet	The baffle door in the A LA CARTE has experienced an over current condition while attempting to open or close. <ul style="list-style-type: none"> • Check baffle door rod for correct adjustment • Open door and inspect left and right track for dirt - clean as required • Check harness to motor for loose connections • Check for obstructions from delivery bin
BAFFLE x TIMEOUT	Baffle Motor Timeout - X indicates which cabinet	Motor left the home position, and never reached the open position in the allotted time, or visa versa <ul style="list-style-type: none"> • Check harness to open and closed position switch • Check switches for proper operation • Check pin on baffle door motor crank arm
LOW VOLTAGE	Low voltage was detected during a Vend	This error will only appear during a vend. This error indicates that a pre-set low voltage threshold was reached for the motor supply circuit. <ul style="list-style-type: none"> • Check the incoming 120Vac supply to the machine - must be within 10% - no lower than 108V • Check for other machines plugged to the same circuit as this machine - rearrange plugs if possible

SW TRAP ERROR - XX	Software Trap TBD			
TIME / DATE / BATT ERROR	Time and date have not been set. Battery has failed.			

<p>Either a key on the keypad is stuck or there is damage to the harness from the keypad to the logic board</p> <ul style="list-style-type: none"> • Check the keypad for a broken or damaged button • Check the harness for a pinched or shorted wire
<p>The Logic Control Board (LCB) has lost communication to the FDB.</p> <ul style="list-style-type: none"> • Check the communications harness between the two boards for damage. If any damage is found, harness should be replaced • Check position of Cabinet Jumper on FDB (C1 or C2) for correct position • Power down and disconnect any MDB payment peripherals, restore power and see if error repeats.
<p>This error will only appear during a power up cycle, and is the result of the contents of the flash memory not agreeing with the stored memory contents on the board.</p> <ul style="list-style-type: none"> • Inspect the board for any physical damage to the smaller flash chip • Access the service mode and perform a complete reset of the control board.
<p>This message will only appear during a power up cycle. The memory contents of the microprocessor on the board have been corrupted, and are not recoverable. The control board must be replaced.</p>
<p>Set time and date. Replace battery.</p>

Troubleshooting

TEMPERATURE SENSE ERRORS		
HEALTH SHUTDOWN CAB x	Health Shut down - X indicates which cabinet	This error indicates that the temperature inside the controlled cabinet has exceeded the maximum set temperature for a pre-set period of time. Check the Health Code Error for date and time of occurrence, along with duration and highest temperature reached.
TEMP CAB1 L ZN OPEN TEMP CAB1 H ZN OPEN TEMP CAB2 OPEN	Temperature Sensor CAB X YY ZONE Open X indicates which cabinet YY indicates upper (H ZN) or lower (L ZN)	The Refrigeration Driver Board (RDB) or Food Driver Board (FDB) has detected that the temperature sensor for one of the zones or cabinets is reporting a temperature reading which indicates the sensor is open <ul style="list-style-type: none"> • Check connections to the RDB – sensor should be plugged to board on JP3 for the lower section, and JP5 for the upper section, or P2 on the FDB
TEMP CAB1 L ZN RANG TEMP CAB1 H ZN RANG TEMP CAB2 RANG	Temperature Sensor CAB X YY ZONE Out of Range X indicates which cabinet YY indicates upper (H ZN) or lower (L ZN)	The RDB or the FDB has detected that the temperature sensor for one of the zones or cabinets is reporting a temperature reading beyond a normal range <ul style="list-style-type: none"> • Check connections to the RDB – sensor should be plugged to board on JP3 for the lower section, and JP5 for the upper section, or P2 on the FDB • Check the temperature probe harness for damage or a short
TEMP X SENSOR BAD	Temperature Sensor error detected – X indicates which cabinet	This error reports a discrepancy in an A LA CARTE between the readings of the defrost bimetal and the temperature sensor. If the bimetal is closed, indicating the refrigeration unit is below 40°F, but the temperature sensor is reporting a temperature that is higher, and error is reported. Also would report an error if the opposite is true – the unit temperature is below 40°F, but the bimetal is open. This error can only occur after a health code period has elapsed. <ul style="list-style-type: none"> • Check P2 connector on FDB • Check for physical damage to the sensor, or the harness • Check the bimetal harness for damage
CABx DEFROST ERROR	Defrost Timeout - X indicates which cabinet	A defrost error is reported when a defrost cycle in an A LA CARTE exceeds 30 minutes. The controller has terminated the defrost cycle, recorded the error, and turned the refrigeration unit back on. <ul style="list-style-type: none"> • Check defrost heater circuit for voltage and resistance or current draw. • Check defrost relay for proper operation • Check the defrost bimetal for proper operation – should open when temperature inside unit reached 50°F
CABx SWITCH ERROR	Defrost Switch Error-X indicates which cabinet	A Switch error will only occur in a frozen A LA CARTE. This error occurs when upon entering a defrost cycle, the bimetal is checked and shows an open status while the temperature being reported is < 20°F. The error is posted, and a fixed 10 minute defrost cycle occurs. <ul style="list-style-type: none"> • Check defrost harness for damaged wire • Verify operation of bimetal defrost sensor

Troubleshooting

GOLDEN EYE ERRORS		
GOLDENEYE XXX FAILED	3 items missed by the Golden EYE Sensor. XXX indicates which selection.	Error would occur is a selection is empty, or if the spiral became disconnected from the motor. This error is reset if the machine door is opened and closed. The error will not be erased until errors are cleared
CABx GOLDENEYE ERROR	Three different selections in a cabinet missed by the Golden EYE Sensor. X indicates which cabinet	As a result of 3 different selections reporting a Golden Eye error, Golden Eye has been disabled for the entire machine. This error is reset if the machine door is opened and closed. The error will not be erased until errors are cleared. Errors for each individual selection with a Golden Eye error should be also reported.
CABx TRAN + REC BAD	All Transmitters and Receivers bad - X indicates which cabinet.	All receivers cannot see any of the transmitters <ul style="list-style-type: none"> • Confirm ribbon cable between the two boards on the bin is correctly plugged in. • Check ribbon cable for damaged wires.
CABx RECEIVER Y BAD	Receiver (Sensor) Y failed, Y indicates the number of the Sensor, X indicates which cabinet	Sensors are numbered on the G/Eye II boards. Sensor 1 is closest to the inside of the machine through # 12 which is closest to the glass. <ul style="list-style-type: none"> • Check for an obstruction to the specific sensor • Check for physical damage or moisture to the specific sensor
CABx TRANSMTR Y BAD	Transmitter (LED) Y failed, Y indicates the number of the LED, X indicates which cabinet	The transmitter LEDs are numbered on the G/Eye II boards. LED # 1 is closest to the glass through LED # 12 which is closest to the inside of the machine. <ul style="list-style-type: none"> • Check for an obstruction to the specific LED • Check for physical damage or moisture to the specific LED
CABx TRN Y TO REC Y	Transmitters Y not seen by a Receiver Y.	In a machine with Golden Eye II, each transmitter sends a beam across the delivery bin to each of the 12 receivers <ul style="list-style-type: none"> • Check for an obstruction to the specific sensor or LED • Check for physical damage or moisture to the specific sensor or LED

Zone Combo – Software Update Instructions

Zone Combo - Software Update Instructions Using a new Flash Memory Chip

CAUTION: The system components in this machine utilize static sensitive components. Precautions for handling sensitive devices should be observed when handling these items.

1. Note any required meter readings or options set.
2. Turn the power switch off.
3. Use a grounding strap and proper anti -static procedures to avoid Electro Static Discharge (ESD) that could damage components on the board.
4. Remove all harnesses from the board except the ribbon cable to the Selection Switches (P1), Display (P12) and Chip (P7).
5. Remove the one screw from the board cover located on the top horizontal edge of the board cover.
6. Remove the board cover by lifting the board cover upward over the latches and pulling forward.
7. Identify the Flash Memory Socket, remove the old software and install the revised software.

NOTE: Pay special attention to the alignment notch when installing the chip to prevent damage to either the chip or the socket! Three of the corners have square edges and one edge is cut at an angle, the angled corner lines up with the alignment notch as shown. Press the Flash Memory chip firmly into the socket.

8. Re-install the board cover and all harnesses.
9. Turn the power switch back on.
10. Press the mode button on the board. Enter the reset code 89171819 on the selection keypad, this will reset all options and prices back to factory defaults and reset all accountability back to zero.
11. Press and hold the switch on the top of the door until the “No row * message” appears.
12. Set prices, options, and test.
