Motor Coupling Harness

December 16, 1999

There is a harness that is now available from the National Vendors Parts Department to be utilized when non-adjacent motor coupling is desired on the newer "Hard Wired" Snack merchandisers, part number 1599024.

The adapter harness is plugged into the existing tray motor harness connector so that extended motor coupling(s) can be performed. This provides additional flexibility to the merchandiser allowing the dispense of wider products, such as "Top Shelf" dinner entrees.

Refer to the figures and instructions on the following page for further clarification.

PREPARING THE MERCHANDISER FOR VENDING "TOP SHELF":

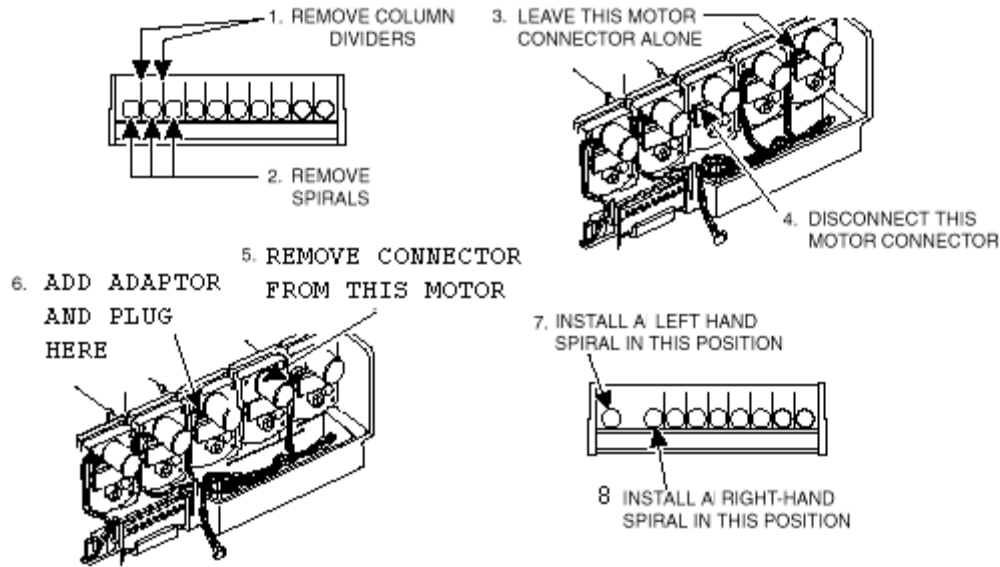

National Vendors recommends that this product be vended from a candy tray.

Move the tray so the package can be loaded standing on its left or right edge.

The following steps must be completed for three adjacent positions on the tray:

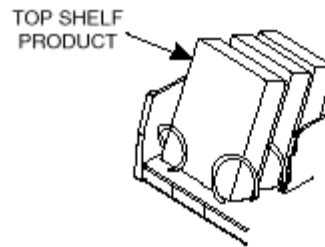

NOTE

The left-most position in the group of three must be an even numbered position.

Couple the left motor to the right motor. See the Programming Guide.

Load the "Top Shelf" products as shown.

Correct Loading Of "Top Shelf".
