Cabinet Harness Upgrade

April 27, 1999

The cabinet harness assembly for the Cold Drink Center has been revised so that voltage is removed from the mechanical syrup pumps when the waste pail switch is actuated.

The new harness went into production on 4/20/99 and is currently available through parts department, part # 328-9023.

This change started with the following machine serial #'s

Domestic	327-010051
Foreign	327-080006

All model 327 merchandisers prior to this serial number will be upgraded free of charge by a National Vendor's Field Service Engineer. A National Vendors' employee will be in contact with any customers that have purchased these merchandisers in order to schedule an appointment for performing this upgrade.

Please refer to the figure on the following page for connection clarification when replacing the harness on any merchandisers prior to this serial number.
