**Frozen Module Time Delay**

**September 14, 1999**

The frozen food module assemblies have been updated with the addition of a time delay relay. The purpose of the time delay relay is to allow all moisture to drain from the evaporator compartment after defrosting the module and prior to starting the evaporator blower.

This change will prevent the excessive formation of ice on the tray motors in the frozen module compartment and can be added to existing merchandisers by ordering kit # **484-4040** from the National Vendors Parts Department.

This change began in production with the following serial numbers.

**Domestic**  
**Foreign**

**Over**

This change is being implemented as part of our ongoing product improvement process

and is not a required update to older machines. If the current owner of a machine chooses to update a machine with this improvement, it is solely at their discretion. Parts are available for purchase from the National Vendor Parts Department and any labor to install or modify any existing equipment is the owner's responsibility.
