**Refreshmentcenter Hot Water Tank Revision**

The hot water tank has been redesigned in order to improve product reliability and overall merchandiser efficiency, the new part number is 485-8019.

This new tank will closely resemble the hot water tank we presently use on the Cafe System 7 and the Hot Drink Center and will have the following changes.

- a) The water valve and bracket assembly now utilized on this merchandiser is part number 623-8112, the older valve assembly part number 475-1256 will **NOT** fit the newer tank.
- b) In order to reduce the possibility of leaks the utility hose is now fastened to a welded nipple at the base of the tank with a hose clamp rather than through a threaded fitting.

Please keep these changes in mind when replacing the older hot water tank with the newer hot water tank assembly.

This change took effect with the following serial numbers:

**485-011036**

**486-010127**

**488-080178**

**489-080783**

**493-010247**
