

Cold Drink MDM SL26

Cold Drink MDM SL26

A Tasteful Choice

The Model SL26X cold cup drink machine offers customers seven different thirst quenchers—six syrup flavors and one seltzer water—plus, a constant supply of crystal clear ice and a button that lets customers select no ice at all.

Superior Technology

Several advanced design features have been incorporated into the MDM SL26X.

The MDM SL26X provides the best mixing system available in a cup vender. This is accomplished via a patented soda mixing nozzle which produces the best brixed drinks in the industry. The reason for the best brix: water and syrup are injected together into the nozzle and mixed there instead of the cup.

Performance is also enhanced with a redesign of the sweet water bath. This has increased the output of cold drinks at least 75 percent over other cooling systems available on the market. For example, it will vend a 36-degree (or below) drink on either an occasional or high volume buying program.

Merchandising abilities of the machine are enhanced by allowing either single or multi-priced selling with just a flip of a switch.

Customer Convenience

Large selection labels attract customers and enhance product appeal, identifying at a glance the wide selection your machine offers.

Illuminated "Temporarily Out Of Service" light avoids customer inconvenience.

Easily Maintained

The MDM SL26X is designed for easy location main-

tenance. A full 2 year warranty helps keep maintenance costs low.

Removable cup station and access door facilitates easy cleaning.

The new Reynolds ice cuber offers superior quality vended ice with minimum maintenance.

European designed syrup pumps will pump a variety of syrups with little or no maintenance required.

A pop-in/pop-out billboard display allows for fast changeovers for your advertising convenience.

MDM SL26X Specifications
