Automatic coffee service for small business locations—from the makers of the most complete line of single cup coffee machines for the coffee service industry.

# **RMi**

**SINGLE-CUPPERS**

*“Standard of the industry”*

## THE COMPACT RMi 240

### FEATURES:

The ultimate automatic machine that brews and dispenses coffee at the drop of a coin or touch of a button . . . now available to firms employing less than 100 persons!

The compact RMi 240 enables the service company to provide the most inexpensive possible automatic coffee service to businesses offering "free" coffee as an employee fringe benefit . . . and makes available 5¢, 10¢ and 15¢ coin control (as well as a coin changer) if the customer prefers to defray the cost of service.

The coffee is sediment-free, uniform and superlative in quality regardless of time span between purchases . . . and it takes just seconds (no more lost employee time in making coffee or waiting for it to brew). Gone, too, are the disorderly spillage and messy clean-up heretofore associated with pour-over and other compact service units.

Simple to load and clean . . . can be done in just a few moments each day by any location-employee.

In plain fact, the compact RMi 240 is now accepted as the standard of the coffee service industry because it simply out-performs, out-features, out-looks any other compact machine on the market.

### SPECIFICATIONS

**DIMENSIONS**—32" high, 18" deep, 18" wide.

**WEIGHT**—115 lbs.

### Compare These Features And Options With Any Other Coffee Service Unit:

- Automatic timer can be pre-set to brew up to 8 cups in succession into a carafe.
- Self-contained creme and sugar available.
- Free-standing on counter or table; or available with storage cabinet as shown on front.
- The only machine with RMi disposable filter; produces up to 10,000 drinks.
- Swing-out, easy-fill coffee hopper.
- Choice of wood grain vinyl or baked enamel finish; with or without photographic art work.
- Simple adjustment yields coffee of exactly the desired strength without a gram of commodity wasted.
- Unitized, self-contained brewing system tested for over a million cycles and requiring minimum service.
- Open, gravity-feed water system; no air pumps or metering devices. Safety cut-off valve prevents overflow. Constant hot water for most efficient extraction.

**CAPACITY**—2 or 4 lbs. coffee.

**ELECTRICAL**—120 volts AC, 60 HZ, 18 AMPS.
