DATE: Dec 2004

75 West Plato Blvd. St. Paul, MN 55107

RE: 223

## SUBJECT: Power Supply Relocation

To improve the reliability of the Café Diem, and to prolong the service life of the heavy-duty 24Vdc power supply, Automatic Products int'l has developed a power supply relocation kit. This relocation kit applies only to machines manufactured before serial number 22304065063

The function of this kit is to move the primary 24Vdc power supply from its original position above the brewer to a position under the canister rack. Moving the power supply to the new location reduces its exposure to two unfavorable conditions for continued operation: dust and heat.

The kit consists of a new mounting enclosure for the power supply, a seven foot harness, and a terminal strip and mounting plate. The instructions for this kit detail the steps to relocate the power supply. This kit is to be used with an operating power supply only, P/N 38773. This kit does not include a power supply.

The Power Supply Relocation Kit, P/N 27500109-01 will be available at a special NET price of \$30.00 each for all orders placed by February 25, 2005. The kit can be ordered from your authorized API distributor, or from Automatic Products int'l Parts Dept. A machine serial number must be supplied with each order, and a limit of 30 kits per order will apply. After February 25, 2005, normal warranty practices will apply.

Please contact the APi Product Support Group at 800-523-5932 with any questions regarding the use or installation of this kit.
