

# GE Temperature Control M029.0

**Order:**            802,800,58x.x1    Temperature Control 501E / 600E  
                         804,916,19x.x1    Temperature Control Adapter Harness

**Installation Instructions:**

1. Unplug the vender.
2. Unplug the existing temperature control (802,800,50x.x1).
3. Remove the existing control from the mounting bracket and remove from the vender.  
Note: In some venders it may be necessary to remove the can bottle chute to access the control.
4. Take the new temperature control and unroll the bellows. Use the old control as a guide to determine the length of the bellows. Be careful not to put any kinks in the bellows. See figure below.
5. Install the new temperature control on the mounting bracket with the plug spade up (at 12 o'clock position). See figure below.
6. Place the end of the bellows in the slot in the fan housing.
7. Plug the temperature control adapter harness in the new temperature control so the harness is going towards the back of the vender.
8. Plug the cabinet harness in the temperature control adapter harness.
9. Plug in the vender and test for proper operation.

**Important:** The control is factory set for an altitude of 500 feet (152 meters). For higher altitudes, an adjustment to the altitude adjustment screw may be needed.
