## Service Bulletin # \_\_\_\_\_

Date: June 12, 1980

MODELS: DN174-6  
DN204-6  
DN246-6

Manufactured in  
1970, 1971

These Models required a square shim for bottle vending.

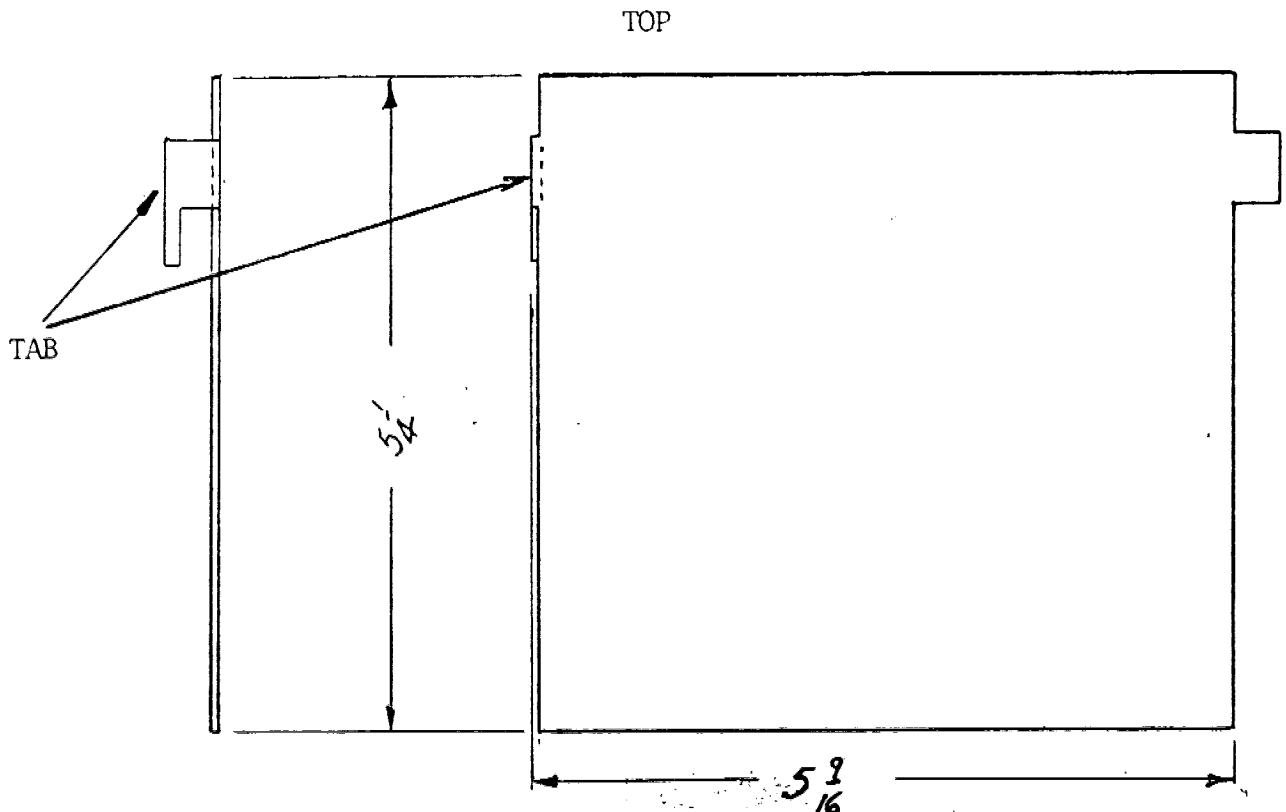

NOTE: At that time no provision had been made in the Stack to use the Pistol Type Shim.

SUBJECT: Modified Formed Shim - Left and Right

ORDER AS: B2500.06-1 Right Standard Flat Square Shim will  
B2500.06-2 Left fit back of these shims

REASON: 1. To provide a "thinner" (16ga) formed shim that would retain flat shims.  
2. To shim these "old" Models so as to satisfactorily vend the 10 oz. NR "B" Bottle.

INSTALLATION: 1. Bend "Tab" approximately 30° (degrees) clockwise. On Right Hand Shim Only. (This prevents butting of "tabs" between column walls.)  
2. Install 1 Modified Shim and 2 Flat Shims on Left and Right Side of Each Column.
