## "THE ADAPTABLES"—Bottle/Double Depth Can Venders

Some of the reasons why Dixie-Narco gives you more for your money, due to long life, less maintenance and minimum out-of-service time.

**1. Extremely simple vend mechanism**—accessible from the front, operating mechanism for each stack can be replaced on location, by removing 4 screws.

**2. Adaptability**—allows either single bottles or double depth can vending . . . some of each if you desire.

**3. "Neon" lamps** — long-lived "sold out" and "correct change" lamps have no filament to break; cut bulb re-

placement, service costs and "temper" damage to door.

**4. "Quick-New" Vandal Panels** — 12-gauge, galvanized steel panels riveted to cabinet wall and bolted to door side, conceal gasket joint; easily replaced on location, to restore new look if vandals strike.

**5. Lockout-control panel**—enclosed, plug-in relays are interchangeable; permit operation of remaining stacks, even if one stack is jammed.

**6. Refrigeration system**—complete refrigeration unit and control are easily reached from front of cabinet; oversized evaporator cools rapidly.

**7. Foamed-in-place insulation** — greater cabinet strength with increased damage resistance, lighter weight, higher insulation efficiency and more vending capacity for a given floor area is provided by polyurethane foamed-in-place insulation.

**8. Double security door**—two rugged, reinforced doors eliminate joint cracks on front of cabinet to discourage vandals; access to coin box from between doors. Accessory lock holds doors together, allowing product loading only.

**9. Corrosion resistance**—top, sides and all external parts of cabinet and door are made of galvanized steel, especially designed to resist ocean spray.
